1. SAFETY INFORMATION

This service manual is intended for qualified service technicians ; It is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health & Safety Code, Section 25249.5). When serving or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols (fast operating fuse) and/or (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible (fusible de type rapide) et/ou (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

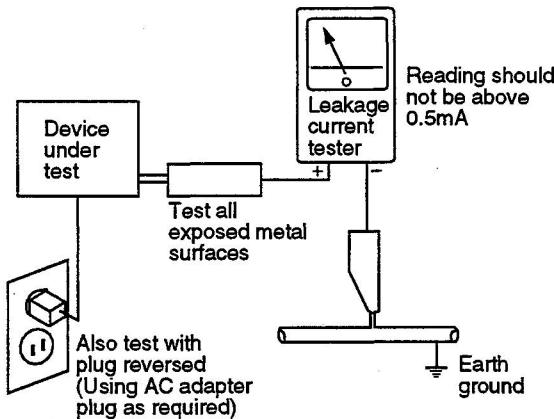

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a Δ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

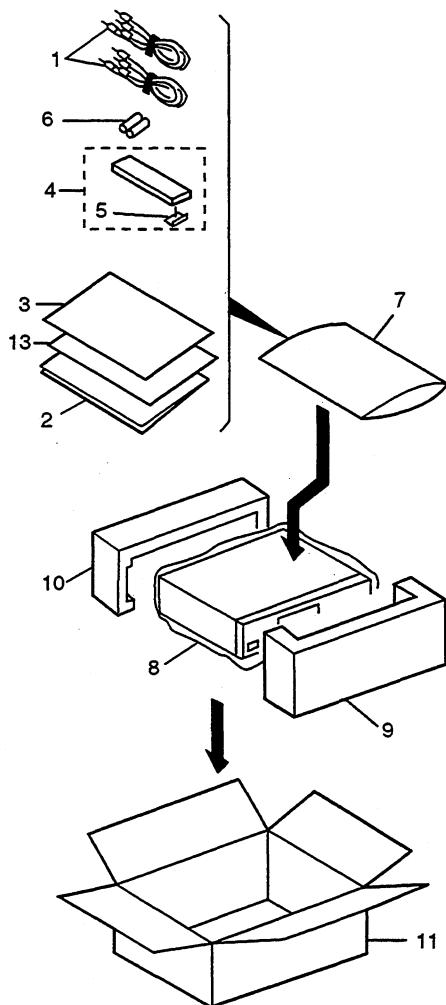

AC Leakage Test

2. EXPLODED VIEWS AND PARTS LIST

NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Screws adjacent to ∇ mark on the product are used for disassembly.

•How to install the disc table

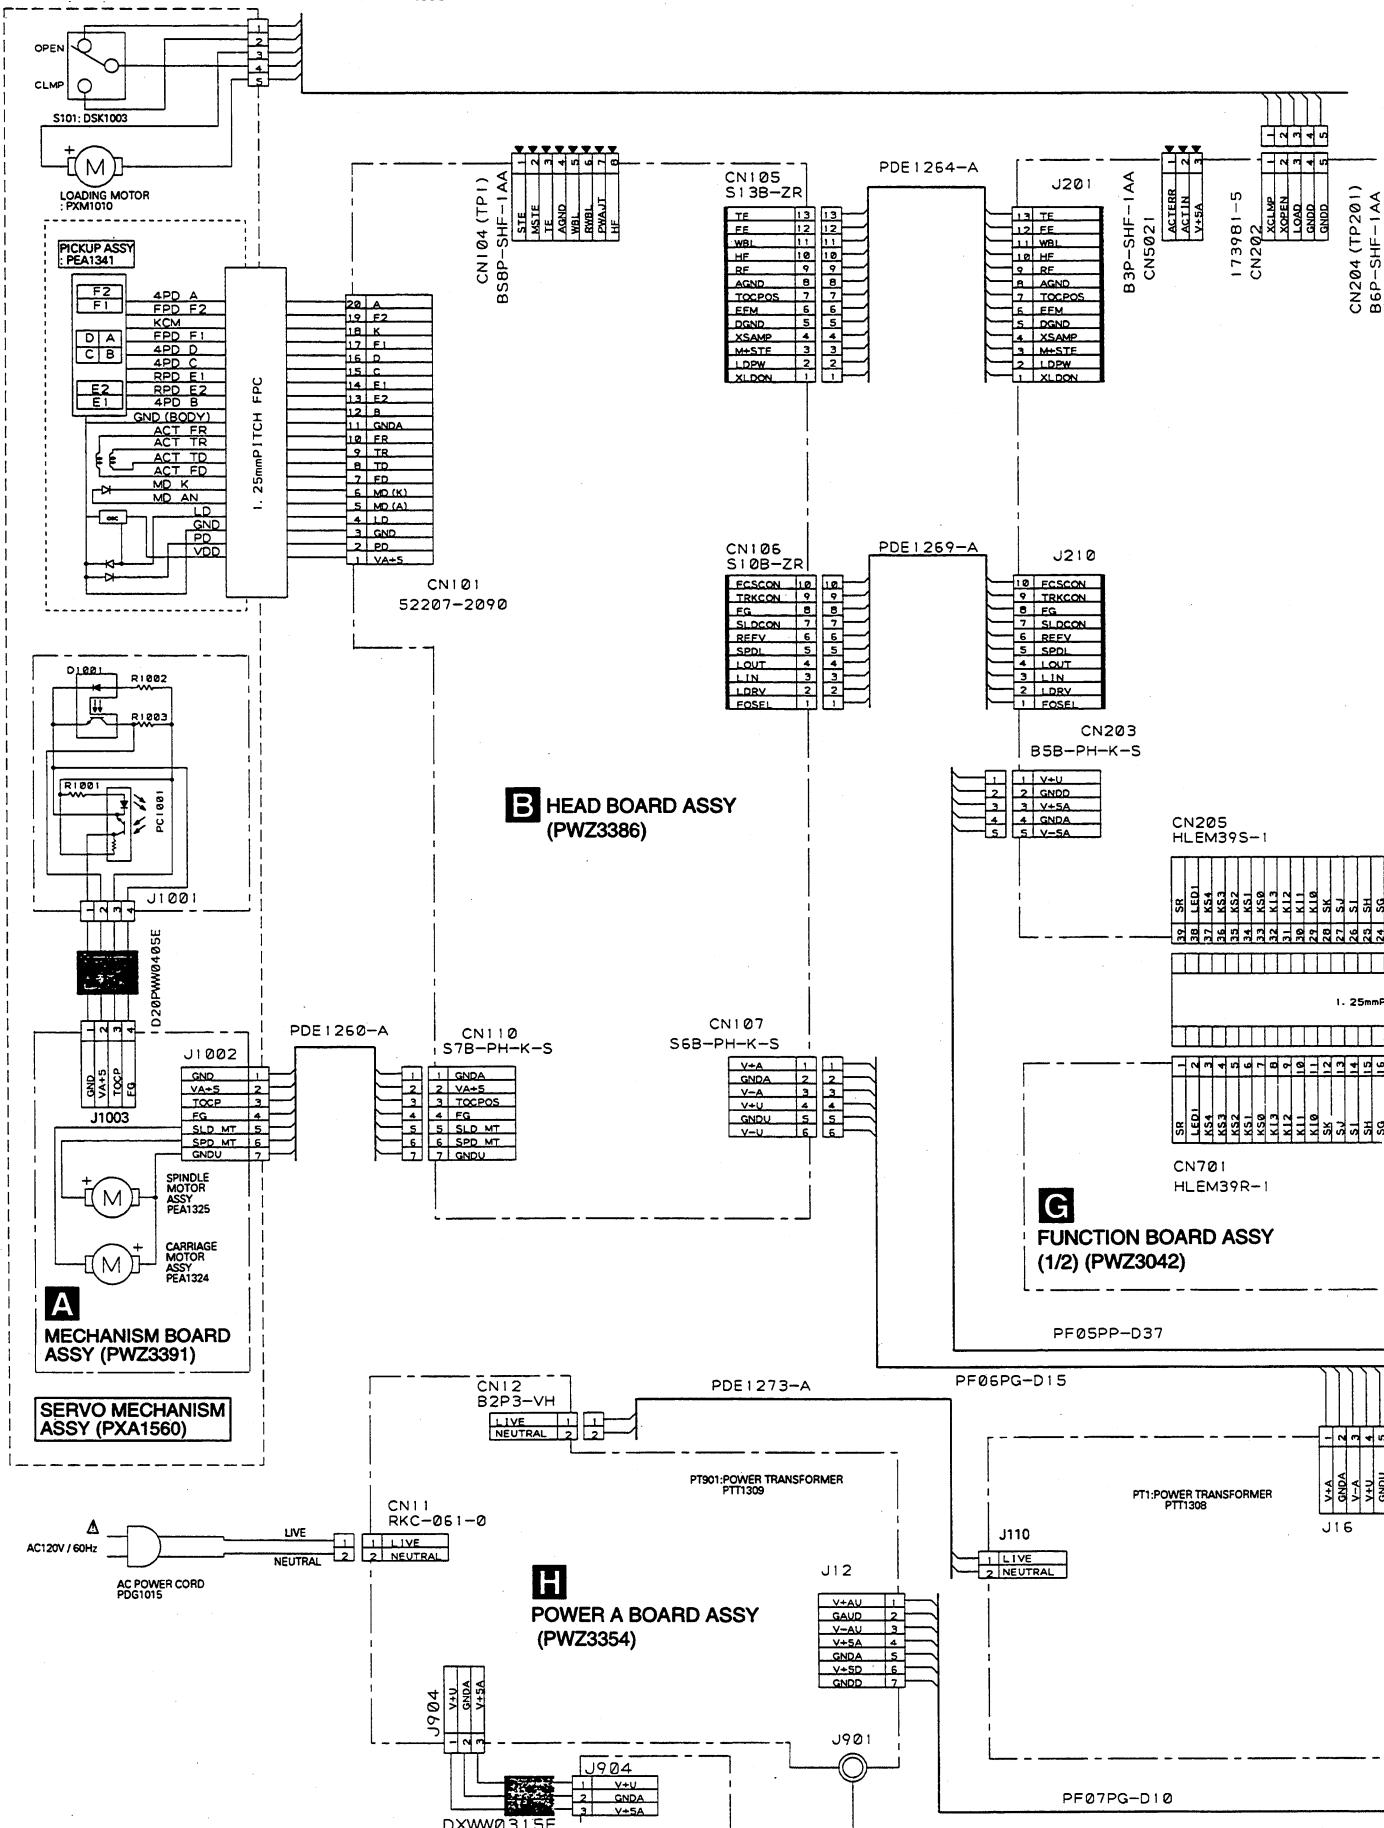

- 1 Use nippers or other tool to cut the two sections marked **(A)** in figure 1. Then remove the spacer.
- 2 While supporting the spindle motor shaft with the stopper, put the spacer on top of the mechanism chassis and stick the disc table TT on top (takes about 9kg pressure). Take off the spacer.

4. PCB CONNECTION DIAGRAM

NOTE FOR PCB DIAGRAMS :

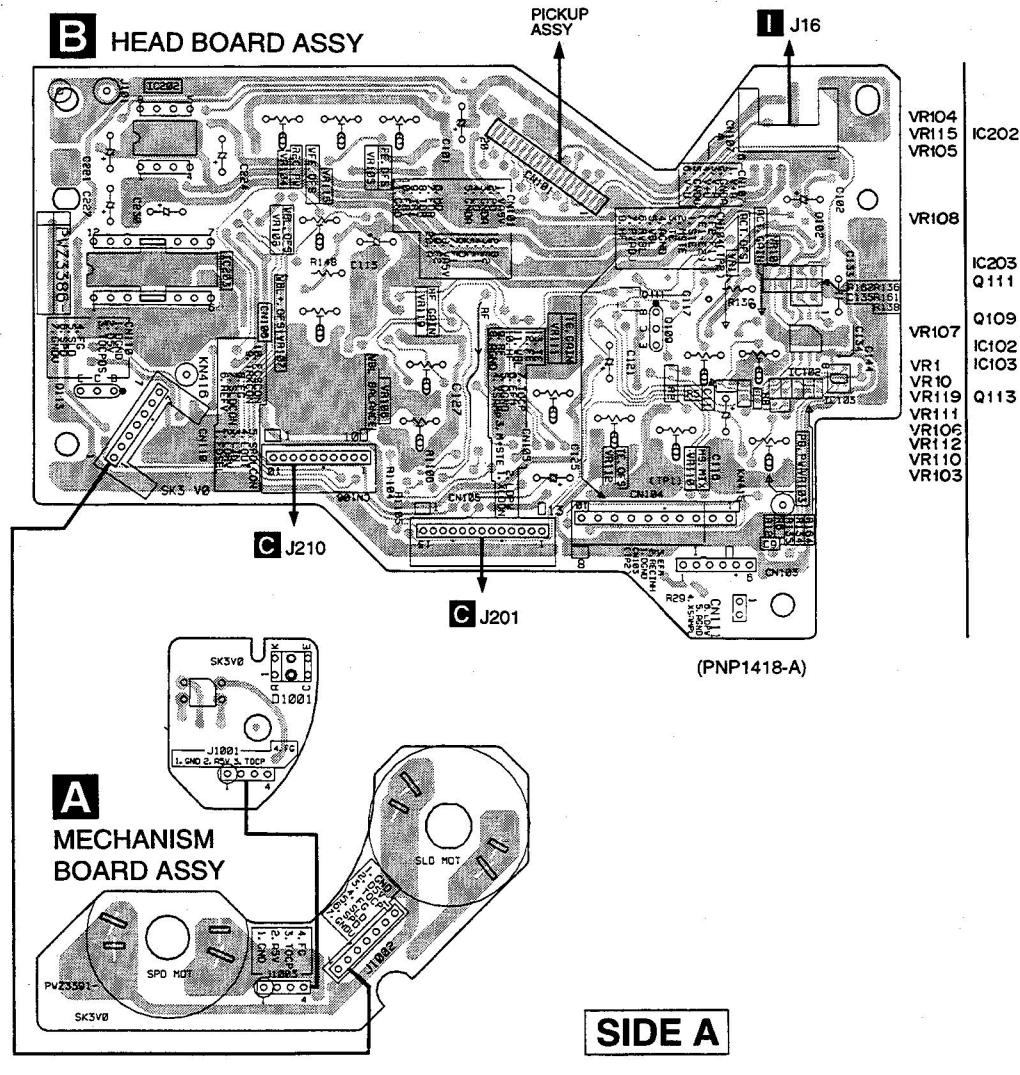

1. Part numbers in PCB diagrams match those in the schematic diagrams.
2. A comparison between the main parts of PCB and schematic diagrams is shown below.

3. The parts mounted on this PCB include all necessary parts for several destinations.
For further information for respective destinations, be sure to check with the schematic diagram.
4. View point of PCB diagrams.

5. PCB PARTS LIST

NOTES: • Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

• The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

• When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560 Ω	\rightarrow	56×10^1	\rightarrow	561	RD1/4PU 5 6 1 J
47k Ω	\rightarrow	47×10^3	\rightarrow	473	RD1/4PU 4 7 3 J
0.5 Ω	\rightarrow	R50			RN2H R 5 0 K
1 Ω	\rightarrow	1R0			RS1P 1 R 0 K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω	\rightarrow	562×10^1	\rightarrow	5621	RN1/4PC 5 6 2 1 F
----------------	---------------	-------------------	---------------	------------	--

6. ADJUSTMENT

6.1 ADJUSTMENT METHODS

If a compact disc recorder is adjusted incorrectly or inadequately, it may malfunction or not work at all even though there is nothing at all wrong with the pickup or the circuitry. Adjust correctly following the adjustment procedure.

● Measuring instruments and Tools

(1) Dual trace oscilloscope (10 : 1 probe)	(6) Resistor (100kΩ)
(2) Low-frequency oscillator	(7) Hexagonal screwdriver (1.27mm diagonal)
(3) Test disc (STD-903), (STD-R03)	(8) Standard tools
(4) Low-pass filter (15kΩ + 0.001μF), (39kΩ + 0.001μF)	(9) Small screwdriver
(5) Hi-pass filter (3.9kΩ + 180pF)	(10) Multimeter (Voltage accuracy : Below 1 mV)

● Adjustment Items / Verification Items and Order

Adjustment 1

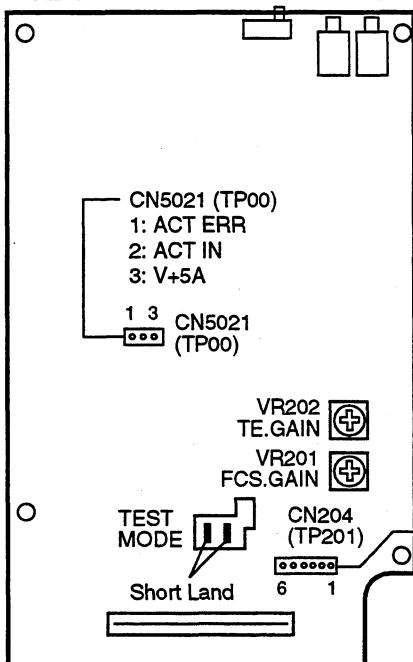

Step	Item	Test Point	Adjustment Location
1	Playback Power Adjustment	CN104 (TP1), Pin 7 (PWAJT)	VR103 (PB. PW)
2	Coarse Focus Offset Adjustment	CN204 (TP201), Pin 1 (RF)	VR105 (FE. OFS)
3	Coarse Skew Adjustment	CN204 (TP201), Pin 1 (RF)	Radial tilt adjustment screw and Tangential tilt adjustment screw
4	Coarse Grating Adjustment	CN104 (TP1), Pin 3 (TE)	Grating adjustment slit
5	DPP (Tracking Offset) Adjustment	CN104 (TP1), Pin 3 (TE)	VR112 (TE. OFS)
6	Fine Focus Offset Adjustment	CN204 (TP201), Pin 1 (RF)	VR105 (FE. OFS)
7	Fine Skew Adjustment	CN204 (TP201), Pin 1 (RF)	Radial tilt adjustment screw and Tangential tilt adjustment screw
8	Grating Re-adjustment	CN104 (TP1), Pin 3 (TE)	Grating adjustment slit

Adjustment 2

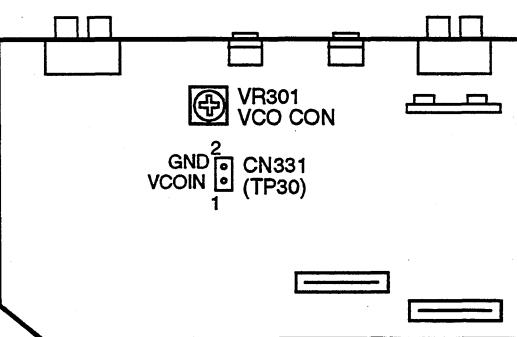

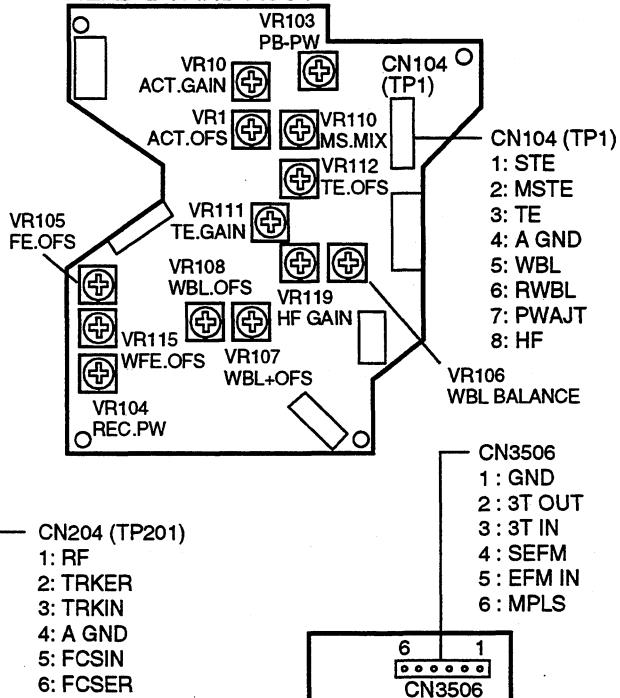

Step	Item	Test Point	Adjustment Location
1	CD-R VCO Control Voltage Adjustment	CN331 (TP30), Pin 1 (VCOIN)	VR301 (VCO CON)
2	Multi Pulse Time Adjustment	CN3506, Pin 6 (MPLS)	VR3501 (MPLS DLY)
3	EFM Rising Edge Time Adjustment	CN3506, Pin 5 (EFM IN) CN3506, Pin 4 (SEFM)	VR3502 (EFM DLY)
4	3T Falling Edge Time Adjustment	CN3506, Pin 3 (3T IN) CN3506, Pin 2 (3T OUT)	VR3503 (3T DLY)
5	WBL+ Offset Adjustment	CN104 (TP1), Pin 6 (RWBL)	VR107 (WBL+. OFS)
6	Coarse WBL Offset Adjustment	CN104 (TP1), Pin 5 (WBL)	VR108 (WBL. OFS)
7	Playback Power Re-adjustment	CN104 (TP1), Pin 7 (PWAJT)	VR103 (PB. PW)
8	Coarse Focus Offset Adjustment	CN204 (TP201), Pin 1 (RF)	VR105 (FE. OFS)
9	Main and Sub Mix Ratio Adjustment	CN104 (TP1), Pin 1 (STE) CN104 (TP1), Pin 2 (MSTE)	VR110 (MS. MIX)
10	Tracking Amp. Gain Adjustment	CN104 (TP1), Pin 3 (TE)	VR111 (TE. GAIN)
11	Tracking Offset Adjustment	CN104 (TP1), Pin 3 (TE)	VR112 (TE. OFS)
12	ACT Offset Adjustment	CN5021 (TP00), Pin 1 (ACT ERR)	VR1 (ACT. OFS)
13	ACT GAIN Adjustment	CN5021 (TP00), Pin 1 (ACT ERR)	VR10 (ACT. GAIN)
14	Fine Focus Offset Adjustment	CN204 (TP201), Pin 1 (RF)	VR105 (FE. OFS)
15	WBL BALANCE Adjustment	CN104 (TP1), Pin 5 (WBL)	VR106 (WBL. BALANCE)

Step	Item	Test Point	Adjustment Location
16	Fine WBL Offset Adjustment	CN104 (TP1), Pin 5 (WBL)	VR108 (WBL. OFS)
17	WBL Focus Offset Adjustment	CN104 (TP1), Pin 5 (WBL)	VR115 (WFE. OFS)
18	Recording Power Adjustment	CN104 (TP1), Pin 7 (PWAJT)	VR104 (REC. PW)
19	HF Amp. Gain Adjustment	CN104 (TP1), Pin 8 (HF)	VR119 (HF. GAIN)
20	Focus Servo Loop Gain Adjustment	CN204 (TP201), Pin 5 (FCSIN) CN204 (TP201), Pin 6 (FCSER)	VR201 (FCS. GAIN)
21	Tracking Servo Loop Gain Adjustment	CN204 (TP201), Pin 2 (TRKER) CN204 (TP201), Pin 3 (TRKIN)	VR202 (TE. GAIN)

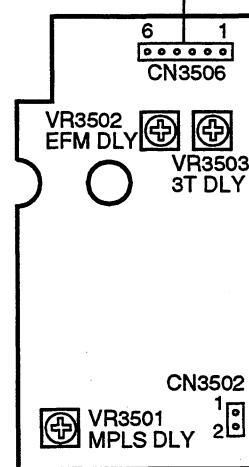

SERVO UCOM BOARD ASSY

HEAD BOARD ASSY

AUDIO DIGITAL BOARD ASSY

STRATEGY SMALL BOARD ASSY

Fig. 1 Adjustment points

PDR-04

● Notes

- (1) Use a 10 : 1 probe for the oscilloscope.
- (2) All the knob positions (settings) for the oscilloscope in the adjustment procedures are for when a 10 : 1 probe is used.

● Test Mode

This model has a test mode so that the adjustments and checks required for service can be carried out easily.

When this model is in test mode, the keys on the front panel work differently from normal. Adjustments and checks can be carried out by operating these keys with the correct procedure. For this model, all adjustments are carried out in test mode.

[Setting to Test Mode]

How to set this model into test mode.

- (1) Unplug the power cord from the AC socket.
- (2) Short the test mode short land. (See Fig. 1.)
- (3) Plug the power cord back into the AC socket.

When the test mode is set correctly, the display is different from what it usually is when the power is turned on. (lights up all FL display) If the display is still the same as usual, test mode has not been set correctly, so repeat Steps 1 – 3.

[Release from Test Mode]

Here is the procedure for releasing the test mode.

- (1) Press the STOP key and stop all operations.
- (2) Unplug the power cord from the AC socket.

[Operations of the Keys in Test Mode]

Code	Key Name	Function In Test Mode	Explanation
	DIGITAL SYNCHRO	Playback laser diode ON	Lights up the laser diode by playback power.
	FINALIZE	Focus servo closes	The laser diode is lit up and the focus acutuator is lowered, then raised slowly and the focus servo is closed at the point where the objective lens is focused on the disc. With the player in this state, if you lightly rotate the stopped disc by hand, you can here the sound the focus servo. If you can hear this sound, the focus servo is operating correctly. If you press this key with no disc mounted, the laser diode lights up, the focus acutuator is pulled down, then the acutuator is raised and lowered three times and returned to its original position.
▶	PLAY	Spindle servo ON	Starts the spindle motor in the clockwise direction and when the disc rotation reaches the prescribed speed (about 500 rpm at the inner periphery), sets the spindle servo in a closed loop.

Code	Key Name	Function In Test Mode	Explanation
■	PAUSE	Tracking servo close/open	Pressing this key when the focus servo and spindle servo are operating correctly in closed loops puts the tracking servo into a closed loop, displays the track number being played back and the elapsed time on the front panel. If the elapsed time is not displayed or not counted correctly, it may be that something is out of adjustment, or that there is some other problem. This key is a toggle key and open/close the tracking servo alternately. This key has no effect if no disc is mounted.
◀ · ▶	MANUAL/ TRACK SEARCH REV	Carriage reverse (inwards)	Moves the pickup position toward the inner diameter of the disc. When this key is pressed with the tracking servo in a closed loop, the tracking servo automatically goes into an open loop. Since the motor does not automatically stop at the mechanical end point in test mode, be careful with this operation.
▶ · ▷	MANUAL/ TRACK SEARCH FWD	Carriage forward (outwards)	Moves the pickup position toward the outer diameter of the disc. When this key is pressed with the tracking servo in a closed loop, the tracking servo automatically goes into an open loop. Since the motor does not automatically stop at the mechanical end point in test mode, be careful with this operation.
■	STOP	Stop	Initializes and the disc rotation stops. The pickup and disc remain where they are when this key is pressed.
▲	OPEN/CLOSE	Disc tray open/close	Open/close the disc tray. This key is a toggle key and open/close tray alternately. Pressing this key when the disc is turning stops the disc, then opens the tray. This key operation does not affect the position of the pickup.
○ ↓ ○	REC ↓ REC MUTE	Maximum recording power Laser diode ON	Lights up the laser diode with maximum recording power and normal EFM by pressing REC and REC MUTE keys in order. * The laser diode may be damaged if adjustments are made before pressing these keys.
	DISPLAY OFF	Focus offset switching	Switches the focus offset state. DISPLAY OFF LED Lights UP : C/N in the best condition Lights OFF : Jitter in the best condition
	WRITE	Optical axis servo switching	Switches the ON/OFF of the optical axis servo. (MANUAL) LED Lights UP : Optical axis servo ON Lights OFF : Optical axis servo OFF

[How to Play Back a Disc in Test Mode]

In test mode, since the servos operate independently, playing back a disc requires that you operate the keys in the correct order to close the servos.

Here is the key operation sequence for playing back a disc in test mode.

FINALIZE Lights up the laser diode and closes the focus servo.
 ↓
 PLAY ► Starts the spindle motor and closes the spindle servo.
 ↓
 PAUSE ■ Closes the tracking servo.

Wait at least 2 – 3 seconds between each of these operations.

6.2 Adjustment 1

6.2.1 Playback Power Adjustment

Adjustment 1

• Objective	To optimize the playback power of the laser diode.		
• Symptom when out of adjustment	Play does not start, track search is impossible, track are skipped.		
• Measurement instrument connections	Connect the multimeter to CN104 (TP1), Pin 7 (PWAJT)	<ul style="list-style-type: none"> • Player state • Adjustment location • Disc 	<ul style="list-style-type: none"> Test mode, Playback laser diode ON VR103 (PB. PW) (HEAD BOARD assy) None needed

[Procedure]

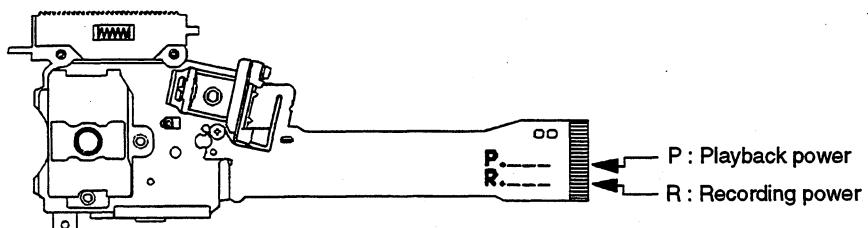

When adjusting with the multimeter.

- (1) Lights up the playback laser diode using the DIGITAL SYNCHRO key.
- (2) Adjust the voltage value of Pin 7 (PWAJT) of CN104 (TP1) to the voltage value (PB PW voltage $\pm 5\text{mV}$) displayed on the pickup flexible cable using VR103 (PB PW).

Note) This adjustment cannot be performed accurately if disc is set. Be sure to remove disc first before adjustments.

Reference: When adjusting with the optical power meter.

- (1) Move the pickup to the outer edge of the disc with the MANUAL / TRACK SEARCH FWD $\blacktriangleright\blacktriangleright\blacktriangleright$ key.
- (2) Lights up the playback laser diode by DIGITAL SYNCHRO key.
- (3) Shine the light discharged from the objective lens in the pickup on the light power meter sensor. Adjust VR103 (PB. PW) so that the playback laser diode output is an average $0.6\text{ mW} \pm 0.05\text{mW}$.
(Wavelength 790nm, Average mode)

* Recording on the disc is not possible in test mode.

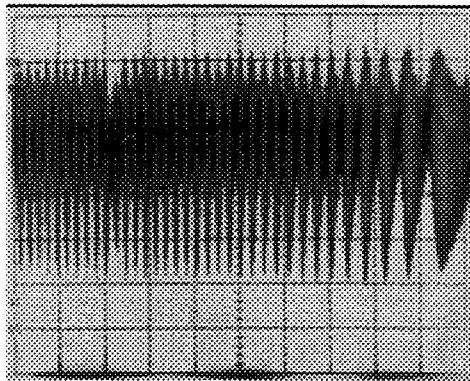

6.2.2 Coarse Focus Offset Adjustment

Adjustment 1

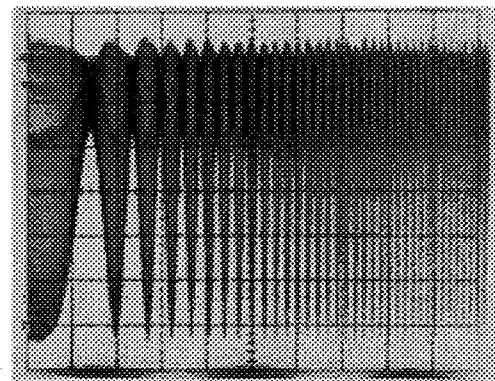

• Objective	To coarse adjust the DC offset voltage of the focus servo circuit for perform the tracking and slider adjustments correctly.		
• Symptom when out of adjustment	The model does not focus in, sound broken and the RF signal is dirty.		
• Measurement instrument connections	<p>Connect the oscilloscope to CN204 (TP201), Pin 1 (RF) (SERVO UCOM BOARD assy)</p> <p>[Settings] 20 mV/div. 2 mS/div. DC mode</p>	<p>• Player state</p> <p>• Adjustment location</p> <p>• Disc</p>	<p>Test mode, focus and spindle servos closed and tracking servo open.</p> <p>VR105 (FE. OFS) (HEAD BOARD assy)</p> <p>STD-903</p>

[Procedure]

- (1) Press the FINALIZE key, then the PLAY ► key in that order to close the focus servo then the spindle servo.
- (2) Adjust VR105 (FE. OFS) so that the amplitude of waveform at CN204 (TP201), Pin 1 (RF) is maximum.

Out of adjustment

Optimum adjustment

6.2.3 Coarse Skew Adjustment

Adjustment 1

• Objective	To coarse adjust the angle of pickup to the disc for perform the grating and DPP (tracking offset) adjustments correctly.		
• Symptom when out of adjustment	Sound broken, some discs can be played but not others.		
• Measurement instrument connections	Connect the oscilloscope to CN204 (TP201), Pin 1 (RF) (SERVO UCOM BOARD assy) [Settings] 20 mV/div. 200 nS/div. AC mode	• Player state • Adjustment location • Disc	Test mode, focus and spindle servos closed and tracking servo open. Radial adjustment screw and tangential adjustment screw STD-903

[Procedure]

- (1) Move the pickup to the position where the radial/tangential adjustment screws will be seen with the MANUAL / TRACK SEARCH FWD $\blacktriangleright\blacktriangleright\blacktriangleright$ or REV $\blacktriangleleft\blacktriangleleft\blacktriangleleft$ keys so that the radial/tangential adjustment screws can be adjusted.
- (2) Press the FINALIZE key, then the PLAY \blacktriangleright key in that order to close the focus servo then the spindle servo.
- (3) Adjust the RAD (radial direction) and TAN (tangential direction) adjustment screws alternately with hexagonal screwdriver (1.27 mm diagonal) to maximize the RF output at CN204 (TP201), Pin 1.

Note : Radial direction and tangential direction mean the direction relative to the disc shown in Fig. 2.

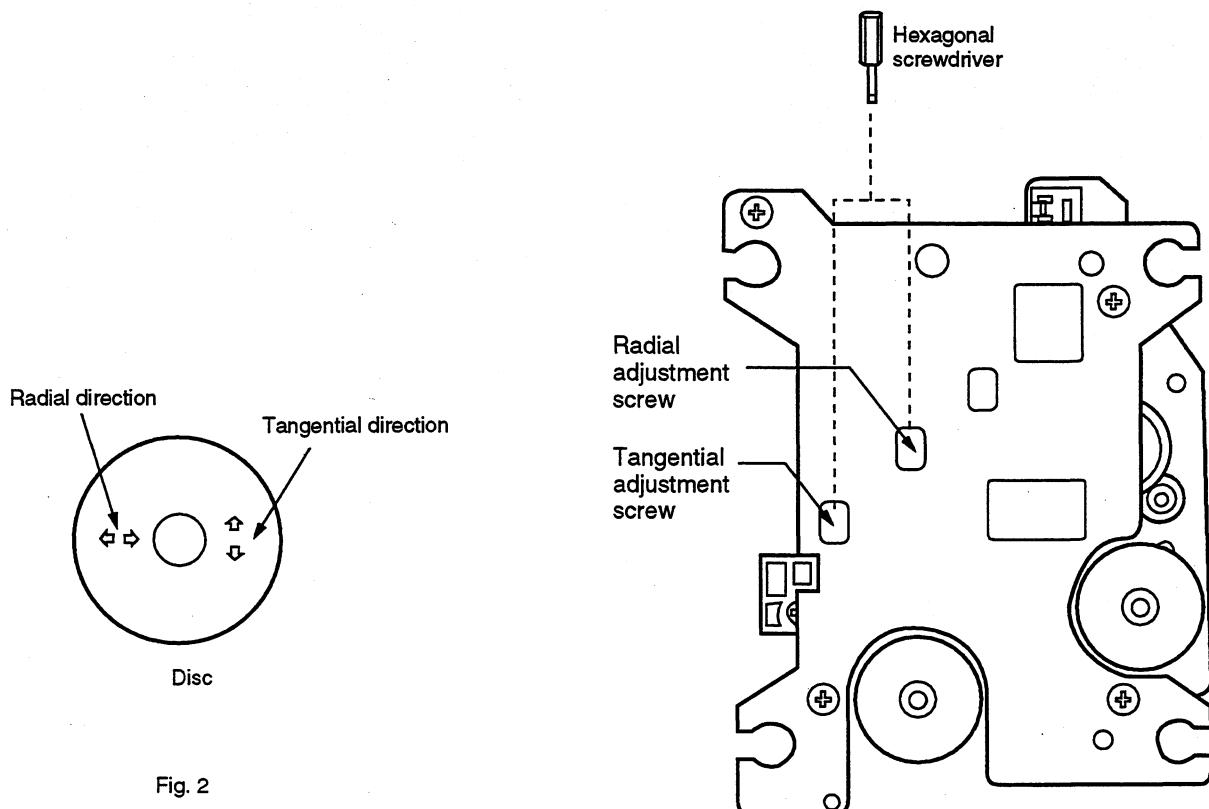

Fig. 2

6.2.4 Coarse Grating Adjustment

Adjustment 1

• Objective	To align the tracking error generation laser beam spots to the optimum angle on the track.		
• Symptom when out of adjustment	Play does not start, track search is impossible, tracks are skipped.		
• Measurement instrument connections	Connect the oscilloscope to CN104 (TP1), Pin 3 (TE) This connection may be via a low pass filter. (See Fig. 3) [Settings] 50 mV/div. 5 mS/div. DC mode	• Player state • Adjustment location • Disc	Test mode, focus and spindle servos closed and tracking servo open. Grating slit on pickup STD-903

[Procedure]

- (1) Move the pickup to the position where the grating adjustment slit will be seen with the MANUAL / TRACK SEARCH FWD **►►►** or REV **◀◀◀** keys so that the grating adjustment can be adjusted.
- (2) Press the FINALIZE key, then the PLAY **►** key in that order to close the focus servo then spindle servo.
- (3) Insert a screwdriver into the grating adjustment slit and adjust the grating to find the null point.
For more details, see next page.
- (4) If you slowly turn the screwdriver clockwise from the null point, the amplitude of the wave gradually increases, then if you continue turning the screwdriver, the amplitude of the wave becomes smaller again. Turn the screwdriver counterclockwise from the null point and set the grating to the first point where the wave amplitude reaches its maximum.
Reference : Fig. 4 shows the relation between the angle of the tracking beam with the track and the waveform.
- (5) Return the pickup to more or less midway across disc with the MANUAL / TRACK SEARCH **◀◀◀** key, press the PAUSE **■** key and check that the track number and elapsed time are displayed on the front panel. If they are not displayed at this time or the elapsed time changes irregularly, check the null point and adjust the grating again.

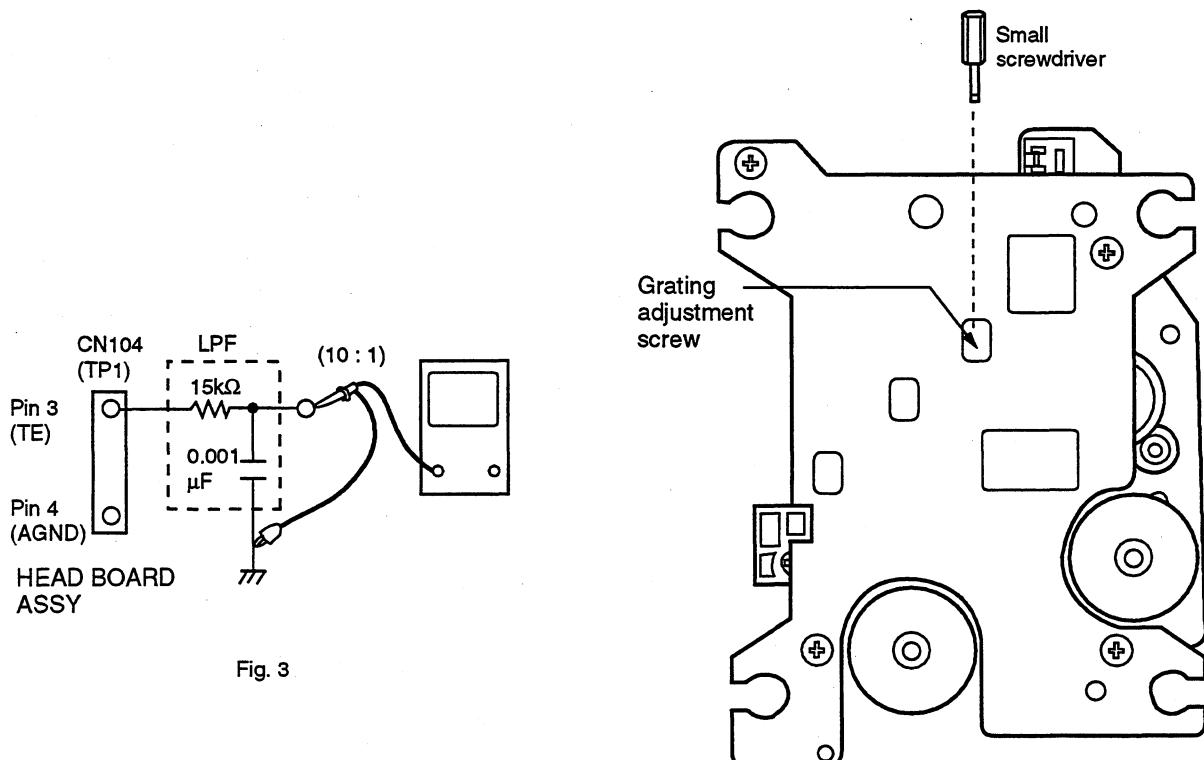

Fig. 3

[How to find the null point]

When you insert the small screwdriver into the slit for the grating adjustment and change the grating angle, the amplitude of the tracking error signal at CN104 (TP1), Pin 3 (TE) changes. Within the range for the grating, there are five or six locations where the amplitude of the wave reaches a minimum. Of these five or six locations, there is only one at which the envelope of the waveform is smooth. This location is where the three laser beams divided by the grating are all right above the same track. (See Fig. 4.)

This point is called the null point. When adjusting the grating, this null point is found and used as the reference position.

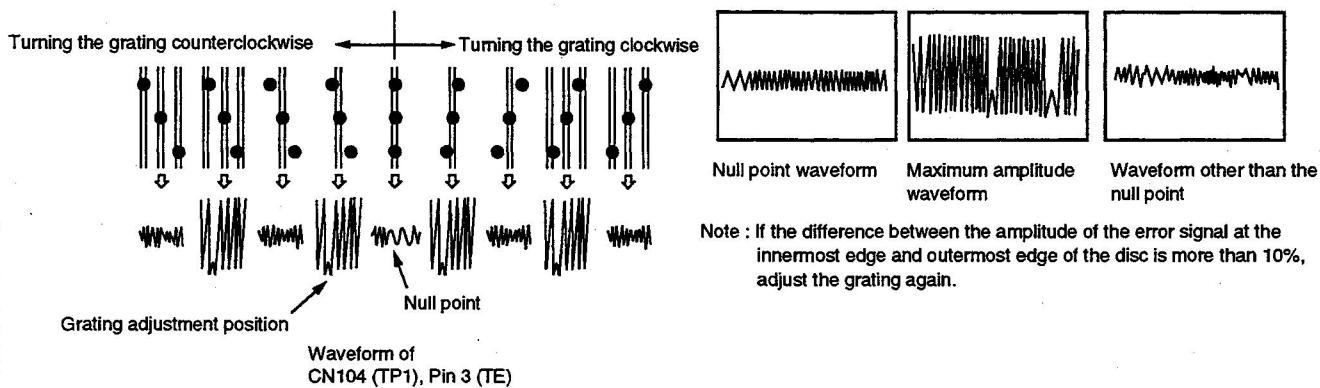

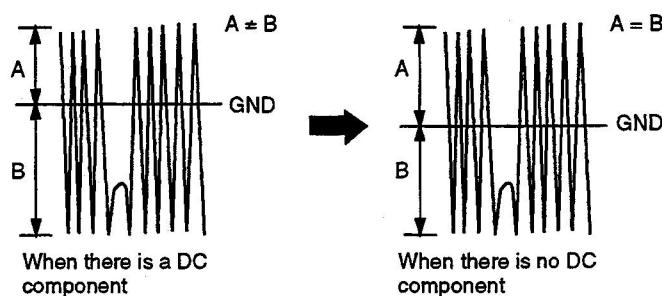

Fig. 4

6.2.5 DPP (Tracking Offset) Adjustment

• Objective	To correct for the variation in the sensitivity of the tracking photodiode.		
• Symptom when out of adjustment	Play does not playback, track search is impossible, tracks are skipped.		
• Measurement instrument connections	Connect the oscilloscope to CN104 (TP1), Pin 3 (TE) [This connection may be via a low pass filter. (15kΩ + 0.001μF)] [Settings] 50 mV/div. 5 mS/div. DC mode	• Player state • Adjustment location • Disc	Test mode, focus and spindle servos closed and tracking servo open. VR112 (TE. OFS) (HEAD BOARD assy) STD-903

[Procedure]

- (1) Move the pickup to the midway across the disc ($R = 35\text{mm}$) with the MANUAL / TRACK SEARCH FWD $\blacktriangleright\blacktriangleright\blacktriangleright\blacktriangleright$ or REV $\blacktriangleleft\blacktriangleleft\blacktriangleleft\blacktriangleleft$ keys.
- (2) Press the FINALIZE key, then the PLAY \blacktriangleright key in that order to close the focus servo then spindle servo.
- (3) Line up the bright line (ground) at the center of the oscilloscope screen and put the oscilloscope into DC mode.
- (4) Adjust VR112 (TE. OFS) so that the positive amplitude and negative amplitude of the tracking error signal at CN104 (TP1), Pin 3 (TE) are the same (in other words, so that there is no DC component).

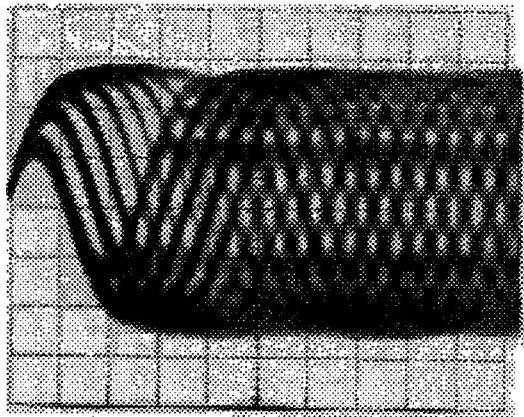

6.2.6 Fine Focus Offset Adjustment

Adjustment 1

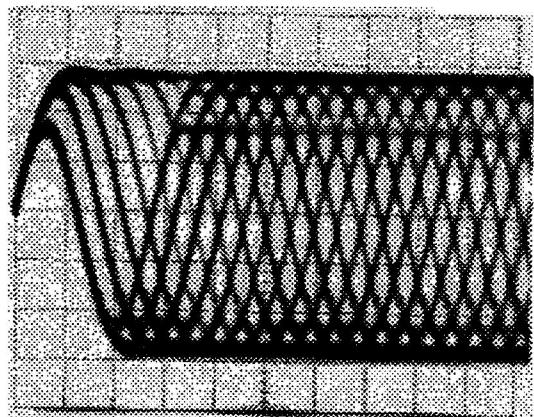

• Objective	To optimize the DC offset voltage of the focus servo circuit.		
• Symptom when out of adjustment	The player does not focus in, sound broken and the RF signal is dirty.		
• Measurement instrument connections	Connect the oscilloscope to CN204 (TP201), Pin 1 (RF). (SERVO UCOM BOARD assy) [Settings] 20 mV/div. 500 nS/div. AC mode	• Player state Test mode, play • Adjustment location VR105 (FE. OFS) (HEAD BOARD assy) • Disc STD-903	

[Procedure]

- (1) Move the pickup to midway across the disc ($R = 35\text{mm}$) with the MANUAL / TRACK SEARCH FWD $\blacktriangleright\blacktriangleright\blacktriangleright$ or REV $\blacktriangleleft\blacktriangleleft$ keys.
- (2) Press the FINALIZE key, the play \blacktriangleright key, then the PAUSE \blacksquare key in that order to close the respective servos and put the player into play mode.
- (3) Adjust VR105 (FE. OFS) so that the 3T waveform at CN204 (TP201), Pin 1 (RF) is maximum.

Out of adjustment

Optimum adjustment

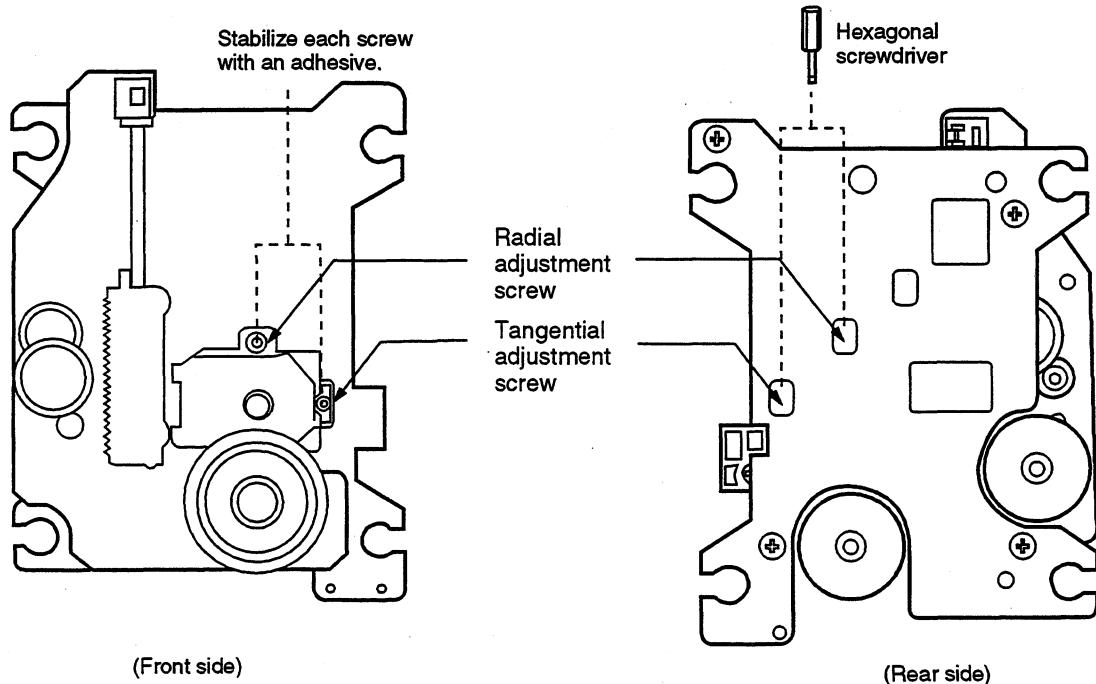

6.2.7 Fine Skew Adjustment

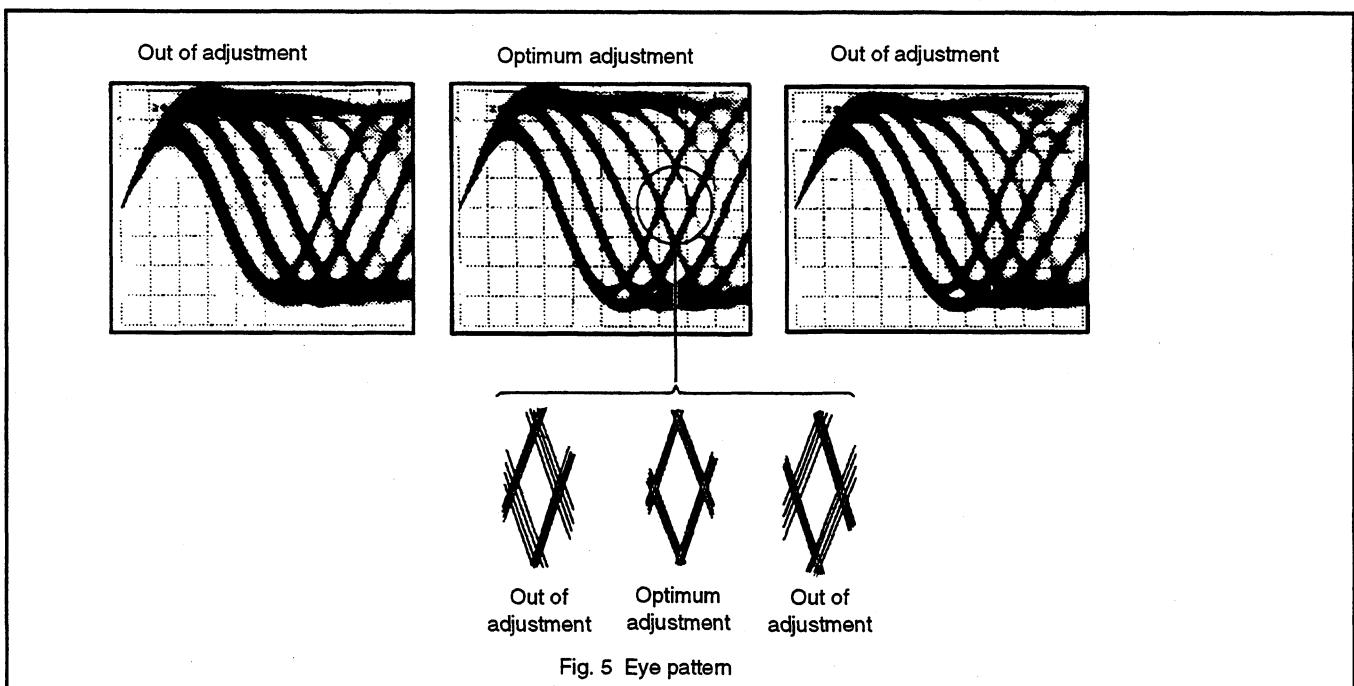

Adjustment 1

• Objective	To adjust the angle of the pickup relative to the disc so that the laser beams are shone straight down into the disc for the best read out of the RF signals.		
• Symptom when out of adjustment	Sound broken, some discs can be played but not others.		
• Measurement instrument connections	Connect the oscilloscope to CN204 (TP201), Pin 1 (RF) (SERVO UCOM BOARD assy) [Settings] 20 mV/div. 200 nS/div. AC mode	• Player state • Adjustment location • Disc	Test mode, play Pickup radial adjustment screw and tangential adjustment screw STD-903

[Procedure]

- (1) Move the pickup to the position where the radial/tangential adjustment screws will be seen with the MANUAL / TRACK SEARCH FWD $\blacktriangleright\blacktriangleright\blacktriangleright$ or REV $\blacktriangleleft\blacktriangleleft\blacktriangleleft$ keys so that the radial/tangential adjustment screws can be adjusted.
- (2) Press the FINALIZE key, then the PLAY \blacktriangleright key to the PAUSE $\blacksquare\blacksquare$ key in that order to close the respective servos and put the player into play mode.
- (3) First, adjust the radial adjustment screw with the hexagonal screwdriver (1.27 mm) so that the eye pattern (the diamond shape at the center of the RF signal) can be seen the most clearly.
- (4) Next, adjust the tangential adjustment screw with the hexagonal screwdriver so that the eye pattern can be seen the most clearly. (Fig. 5).
- (5) Adjust in the order of the radial adjustment screw and the tangential screw again, so that the eye pattern can be seen the most clearly. As necessary, adjust the two screws alternately so that the eye pattern can be seen the most clearly.
- (6) After the adjustment, remove the float screw, turn over the servo mechanism assembly, then stabilize the radial adjustment screw and the tangential adjustment screw with an adhesive.

Adjustment 1**6.2.8 Grating Re-adjustment**Adjustment 1

Adjust in the same manner as "4. Coarse Grating Adjustment" in Adjustment 1.

6.3 Adjustment 2**6.3.1 CD-R VCO Control Voltage Adjustment**Adjustment 2

• Objective	To optimize the CD-R VCO control voltage adjustment of VCO IC.		
• Symptom when out of adjustment	Player does not record or playback CD-R discs.		
• Measurement instrument connections	Connect the multimeter to CN331 (TP30), Pin 1 (VCOIN) (AUDIO DIGITAL BOARD assy)	• Player state • Adjustment location • Disc	Test mode, stop VR301 (VCOIN) (AUDIO DIGITAL BOARD assy) None needed

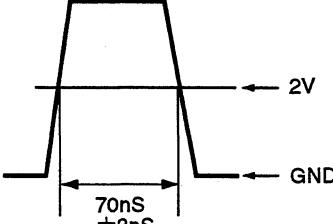

[Procedure]

(1) Adjust VR301 (VCO CON) so that the voltage at Pin 1 (VCOIN) of CN331 (TP30) becomes $2.5 \pm 0.1V$.

PDR-04

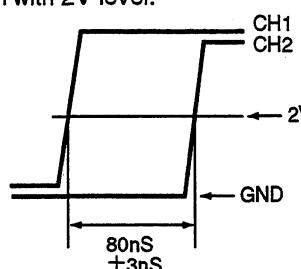

6.3.2 Multi Pulse Time Adjustment

Adjustment 2

• Objective	Pulse adjustment for recording (1)		
• Symptom when out of adjustment	Player does not playback CD-R discs which was recorded with this player .		
• Measurement instrument connections	Connect the oscilloscope to CN3506, Pin 6 (MPLS). (STRATEGY SMALL BOARD assy) [Settings] 1 mV/div. 20 nS/div. DC mode	• Player state • Adjustment location • Disc	Test mode, stop VR3501 (MPLS DLY) (STRATEGY SMALL BOARD assy) None needed
[Procedure]			
(1) Disconnect a connector CN3502. (2) Adjust the time from rising edge to falling edge of Waveform with 2V level. (3) Adjust VR3501 (MPLS DLY) so that the DC voltage at CN3506 pin 6 (MPLS) becomes $70nS \pm 3nS$.			
			

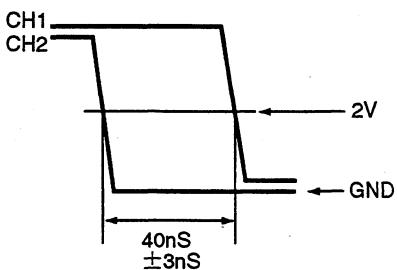

6.3.3 EFM Rising Edge Time Adjustment

Adjustment 2

• Objective	Pulse adjustment for recording (2)		
• Symptom when out of adjustment	Player does not playback CD-R discs which was recorded with this player .		
• Measurement instrument connections	Connect the oscilloscope to CH1 : CN3506, Pin 5 (EFM IN). CH2 : CN3506, Pin 4 (SEFM). (STRATEGY SMALL BOARD assy) [Settings] CH1 : 1 V/div. DC mode 20 nS/div. CH2 : 1 V/div. DC mode	• Player state • Adjustment location • Disc	Test mode, recording power ON VR3502 (EFM DLY) (STRATEGY SMALL BOARD assy) None needed
[Procedure]			
(1) Disconnect a connector CN3502. (2) Turn VR104 (REC. PW) fully counterclockwise to reduce the power is minimum. (3) Press REC \circ and REC MUTE \circ keys in this order to lights up the laser diode. (4) Adjust the time from rising edge of CN3506 pin 5 to rising edge of pin 4 of waveform with 2V level. (5) Adjust VR3502 (EFM DLY) so that the DC voltage becomes $80nS \pm 3nS$.			
			

6.3.4 3T Falling Edge Time Adjustment

Adjustment 2

• Objective	Pulse adjustment for recording (3)		
• Symptom when out of adjustment	Player does not playback CD-R discs which was recorded with this player .		
• Measurement instrument connections	Connect the oscilloscope to CH1 : CN3506, Pin 3 (3T IN). CH2 : CN3506, Pin 2 (3T OUT). (STRATEGY SMALL BOARD assy) [Settings] CH1 : 1 V/div. DC mode 20 nS/div. CH2 : 1 V/div. DC mode	• Player state Test mode, recording power ON VR3503 (3T DLY) (STRATEGY SMALL BOARD assy) None needed	• Adjustment location • Disc
[Procedure]			
(1) Disconnect a connector CN3502. (2) Turn VR104 (REC. PW) fully counterclockwise to reduce the power is minimum. (3) Press REC  and REC MUTE  keys in this order to lights up the laser diode. (4) Adjust the time from falling edge of CN3506 pin 3 to falling edge of pin 2 of waveform with 2V level. (5) Adjust VR3503 (3T DLY) so that the DC voltage becomes $40nS \pm 3nS$.			
			

6.3.5 WBL+ Offset Adjustment

Adjustment 2

• Objective	To adjust the gain balance of the wobble signal.		
• Symptom when out of adjustment	Player does not record or playback CD-R discs.		
• Measurement instrument connections	Connect the oscilloscope to CN104 (TP1), Pin 6 (RWBL). (HEAD BOARD assy) [Settings] 1 mV/div. 5 mS/div. DC mode	• Player state Test mode, stop VR107 (WBL+. OFS) (HEAD BOARD assy) None needed	• Adjustment location • Disc
[Procedure]			
(1) Turn VR108 (WBL. OFS) to fully counterclockwise. (2) Adjust VR107 (WBL+. OFS) so that the DC voltage at CN104 (TP1), Pin 6 (RWBL) is $-20mV \pm 10mV$.			

PDR-04

6.3.6 Coarse WBL Offset Adjustment

Adjustment 2

• Objective	To optimize the DC offset voltage of the wobble amp.		
• Symptom when out of adjustment	Player does not record or playback CD-R discs.		
• Measurement instrument connections	Connect the oscilloscope to CN104 (TP1), Pin 5 (WBL). (HEAD BOARD assy) [Settings] 1 mV/div. 5 mS/div. DC mode	• Player state • Adjustment location • Disc	Test mode, stop VR108 (WBL. OFS) (HEAD BOARD assy) None needed
[Procedure]			
(1) Adjust VR108 (WBL. OFS) so that the DC voltage at Pin 5 (WBL) of CN104 (TP1) becomes $0 \pm 10\text{mV}$.			

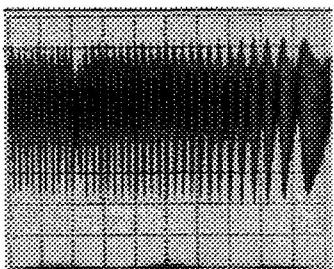

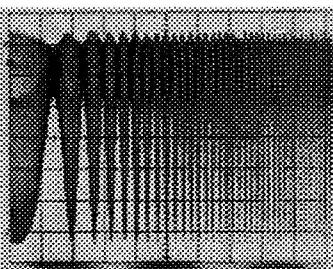

6.3.7 Playback Power Re-adjustment

Adjustment 2

Adjust in the same manner as "1. Playback Power Adjustment" in Adjustment 1.
--

6.3.8 Coarse Focus Offset Adjustment

Adjustment 2

• Objective	To optimize the DC offset voltage of the focus error amp.		
• Symptom when out of adjustment	The player does not focus in add the RF signal is dirty.		
• Measurement instrument connections	Connect the oscilloscope to CN204 (TP201), Pin 1 (RF). (SERVO UCOM BOARD assy) [Settings] 20 mV/div. 2 mS/div. DC mode	• Player state • Adjustment location • Disc	Test mode, focus and spindle servos closed and tracking servo open. VR105 (FE. OFS) (HEAD BOARD assy) STD-903
[Procedure]			
(1) Press the FINALIZE key, then the PLAY ▶ key in that order to close the focus servo then the spindle servo. (2) Adjust VR105 (FE. OFS) so that the amplitude of RF signal at CN204 (TP201), Pin 1 (RF) is maximum.			
 			
<p>Out of adjustment</p> <p>Optimum adjustment</p>			

6.3.9 Main and Sub Mix Ratio Adjustment

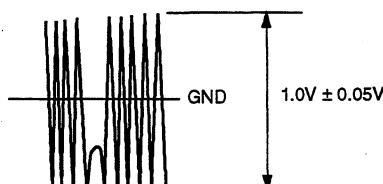

Adjustment 2

• Objective	To mix the gain of the main signal output and sub signal output of the pickup.		
• Symptom when out of adjustment	Player does not playback.		
• Measurement instrument connections	Connect the oscilloscope to CH1: CN104 (TP1), Pin 1 (STE) CH2: CN104 (TP1), Pin 2 (MSTE) [These connections must be via low pass filters.] [Settings] CH1 : 50 mV/div. AC mode 10 mS/div. ADD mode CH2 : 100 mV/div. AC mode	• Player state • Adjustment location • Disc	Test mode, focus and spindle servos closed and tracking servo open VR110 (MS. MIX) (HEAD BOARD assy) STD-903
[Procedure]			
(1) Press the FINALIZE key, then the PLAY ► key in that order to close the focus servo then the spindle servo. (2) Set the oscilloscope to ADD mode (waveform adding mode of CH1 and CH2) and observe the adding waveform of CH1 and CH2. (3) Adjust VR110 (MS. MIX) so that the amplitude of waveform becomes minimum.			

6.3.10 Tracking Amp. Gain Adjustment

Adjustment 2

• Objective	To correct the discrepancy in the tracking error level with the pickup.		
• Symptom when out of adjustment	Player does not playback, track search is impossible, tracks are skipped.		
• Measurement instrument connections	Connect the oscilloscope to CN104 (TP1), Pin 3 (TE) [These connection must be via a low pass filter (15kΩ + 0.001μF).] [Settings] 20 mV/div. 5 mS/div. DC mode	• Player state • Adjustment location • Disc	Test mode, focus and spindle servos closed and tracking servo open VR111 (TE. GAIN) (HEAD BOARD assy) STD-903
[Procedure]			
(1) Move the pickup to midway across the disc (R = 35mm) with the MANUAL / TRACK SEARCH FWD ►►► or REV ►◄◄ keys. (2) Press the FINALIZE key, then the PLAY ► key in that order to close the focus servo then the spindle servo. (3) Line up the bright line (ground) at the center of the oscilloscope screen and put the oscilloscope into DC mode. (4) Adjust VR111 (TE. GAIN) so that the positive amplitude and negative amplitude of the tracking error signal at CN104 (TP1), Pin 3 (TE) is $1.0V \pm 0.05V$.			

6.3.11 Tracking Offset Adjustment

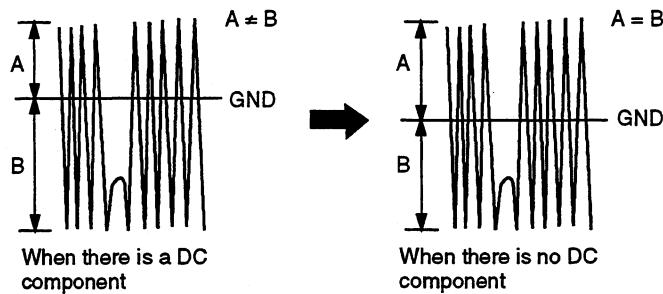

Adjustment 2

• Objective	To correct for the variation in the sensitivity of the tracking photodiode.		
• Symptom when out of adjustment	Player does not playback, track search is impossible, tracks are skipped.		
• Measurement instrument connections	Connect the oscilloscope to CN104 (TP1), Pin 3 (TE). [This connection must be via a low pass filter (15kΩ + 0.001μF).] [Settings] 20 mV/div. 5 mS/div. DC mode	• Player state • Adjustment location • Disc	Test mode, focus and spindle servos closed and tracking servo open. VR112 (TE. OFS) (HEAD BOARD assy) STD-903

[Procedure]

- (1) Move the pickup to midway across the disc (R = 35mm) with the MANUAL / TRACK SEARCH FWD $\blacktriangleright\blacktriangleright\blacktriangleright\blacktriangleright$ or REV $\blacktriangleleft\blacktriangleleft$ keys.
- (2) Press the FINALIZE key, then the PLAY \blacktriangleright key in that order to close the focus servo then the spindle servo.
- (3) Line up the bright line (ground) at the center of the oscilloscope screen and put the oscilloscope into DC mode.
- (4) Adjust VR112 (TE. OFS) so that the positive amplitude and negative amplitude of the tracking error signal at CN104 (TP1), Pin 3 (TE) are the same (in other words, so that there is no DC component).

Note : Perform the run-on adjustment in the section 7 and 8.

6.3.12 ACT Offset Adjustment

Adjustment 2

• Objective	To optimize the DC offset voltage of the actuator servo.		
• Symptom when out of adjustment	Player does not pause, track search is impossible, tracks are skipped.		
• Measurement instrument connections	Connect the oscilloscope to CN5021 (TP00), Pin 1 (ACT ERR). (SERVO UCOM BOARD assy) [Settings] 5 mV/div. 5 mS/div. DC mode	• Player state • Adjustment location • Disc	Test mode, focus and spindle servos closed and tracking servo open. VR1 (ACT. OFS) (HEAD BOARD assy) STD-903
[Procedure]			
(1) Move the pickup to midway across the disc ($R = 35mm$) with the MANUAL / TRACK SEARCH FWD $\blacktriangleright\blacktriangleright\blacktriangleright$ or REV $\blacktriangleleft\blacktriangleleft$ keys. (2) Press the FINALIZE key, then the PLAY \blacktriangleright key in that order to close the focus servo then the spindle servo. (3) Adjust VR1 (ACT. OFS) so that the DC voltage at CN5021 (TP00), Pin 1 (ACT ERR) is $0 \pm 20mV$.			

6.3.13 ACT Gain Adjustment

Adjustment 2

• Objective	To optimize the actuator servo gain.		
• Symptom when out of adjustment	Player does not pause, track search is impossible, tracks are skipped.		
• Measurement instrument connections	Connect the oscilloscope to CN5021 (TP00), Pin 1 (ACT ERR). (SERVO UCOM BOARD assy) [Settings] 10 mV/div. 5 mS/div. DC mode	• Player state • Adjustment location • Disc	Test mode, focus and spindle servos closed and tracking servo open. VR10 (ACT. GAIN) (HEAD BOARD assy) STD-903
[Procedure]			
(1) Move the pickup to midway across the disc ($R = 35mm$) with the MANUAL / TRACK SEARCH FWD $\blacktriangleright\blacktriangleright\blacktriangleright$ or REV $\blacktriangleleft\blacktriangleleft$ keys. (2) Press the FINALIZE key, then the PLAY \blacktriangleright key in that order to close the focus servo then the spindle servo. (3) Press the WRITE key to light up the WRITE KEY LED, and short-circuit the Pin 2 and Pin 3 of CN5021 (TP00). (4) Adjust VR10 (ACT. GAIN) so that the DC voltage at CN5021 (TP00), Pin 1 (ACT ERR) is $-380 \pm 20mV$. Note : Perform the run-on adjustment in the section 9 and 10.			

6.3.14 Fine Focus Offset Adjustment

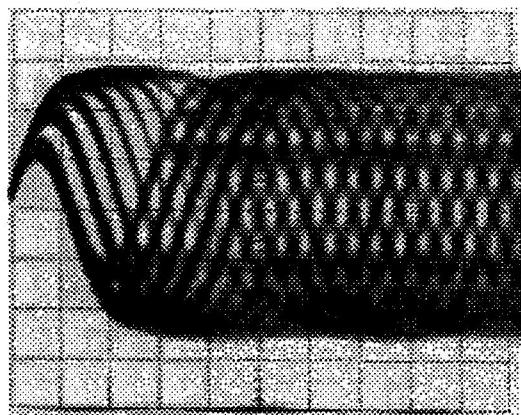

Adjustment 2

• Objective	To optimize the DC offset voltage of the focus servo circuit.		
• Symptom when out of adjustment	The player does not focus in, sound broken and the RF signal is dirty.		
• Measurement instrument connections	<p>Connect the oscilloscope to CN204 (TP201), Pin 1 (RF). (SERVO UCOM BOARD assy)</p> <p>[Settings] 20 mV/div. 500 nS/div. AC mode</p>	<p>• Player state</p> <p>• Adjustment location</p> <p>• Disc</p>	<p>Test mode, play</p> <p>VR105 (FE. OFS) (HEAD BOARD assy)</p> <p>STD-R03</p>

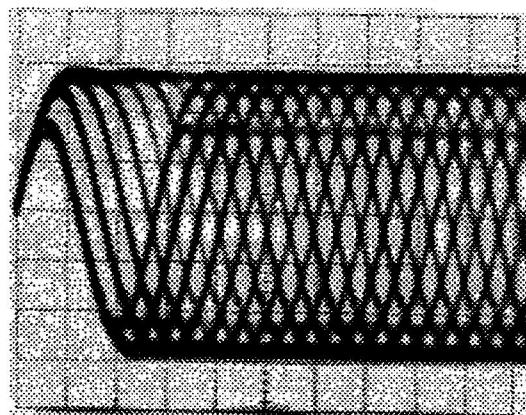

[Procedure]

- (1) Move the pickup to midway across the disc (R = 35mm) with the MANUAL / TRACK SEARCH FWD $\blacktriangleright\blacktriangleright\blacktriangleright$ or REV $\blacktriangleleft\blacktriangleleft$ keys.
- (2) Press the FINALIZE key, the PLAY \blacktriangleright key, then the PAUSE \blacksquare key in that order to close the respective servos and put the player into play mode.
- (3) Adjust VR105 (FE. OFS) so that the 3T waveform at CN204 (TP201), Pin 1 (RF) is maximum.

Note : Adjust after confirming that the WRITE KEY LED is OFF.

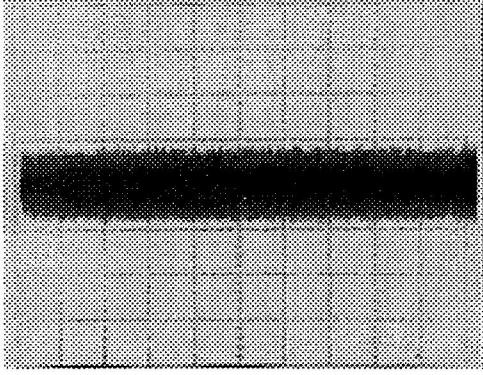

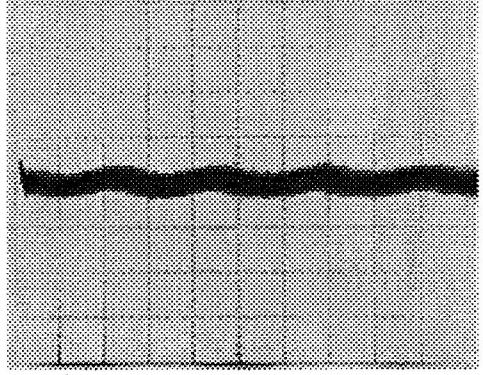

Out of adjustment

Optimum adjustment

6.3.15 WBL Balance Adjustment

Adjustment 2

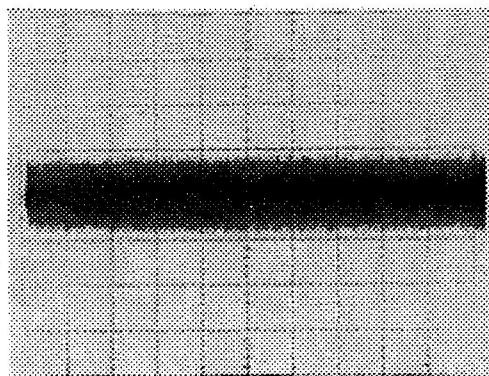

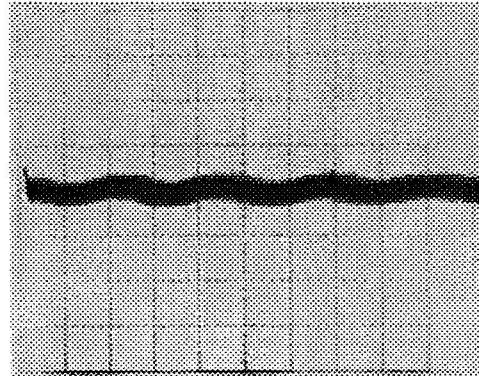

• Objective	To adjust the gain balance of the wobble signal.		
• Symptom when out of adjustment	Player does not record or search or pause CD-R discs.		
• Measurement instrument connections	Connect the oscilloscope to CN104 (TP1), Pin 5 (WBL). [This connection must be via a high-pass filter (180pF+3.9kΩ).] [Settings] 5 mV/div. 20 µS/div. DC mode	• Player state • Adjustment location • Disc	Test mode, play VR106 (WBL. BALANCE) (HEAD BOARD assy) STD-R03
[Procedure]			
<p>(1) Move the pickup to midway across the disc ($R = 35\text{mm}$) with the MANUAL / TRACK SEARCH FWD $\blacktriangleright\blacktriangleright\blacktriangleright$ or REV $\blacktriangleleft\blacktriangleleft$ keys.</p> <p>(2) Press the FINALIZE key, the PLAY \blacktriangleright key, then the PAUSE \blacksquare key in that order to close the respective servos and put the player into play mode.</p> <p>(3) Adjust VR106 (WBL. BALANCE) so that the amplitude of waveform at CN104 (TP1), Pin 5 (WBL) is minimum.</p>			
 			

6.3.16 Fine WBL Offset Adjustment**Adjustment 2**

• Objective	To adjust the gain balance of the wobble signal.		
• Symptom when out of adjustment	Player does not record or search or pause CD-R discs.		
• Measurement instrument connections	Connect the oscilloscope to CN104 (TP1), Pin 5 (WBL). [This connection must be via a high-pass filter (180pF+3.9kΩ).] [Settings] 5 mV/div. 20 µS/div. DC mode	• Player state • Adjustment location • Disc	Test mode, play VR108 (WBL. OFS) (HEAD BOARD assy) STD-R03

[Procedure]

- (1) Move the pickup to midway across the disc (R = 35mm) with the MANUAL / TRACK SEARCH FWD **▶▶▶▶▶** or REV **◀◀◀◀◀** keys.
- (2) Press the FINALIZE key, the PLAY **▶** key, then the PAUSE **■■** key in that order to close the respective servos and put the player into play mode.
- (3) Adjust VR108 (WBL. OFS) so that the amplitude of waveform at CN104 (TP1), Pin 5 (WBL) is minimum.

**Out of adjustment****Optimum adjustment**

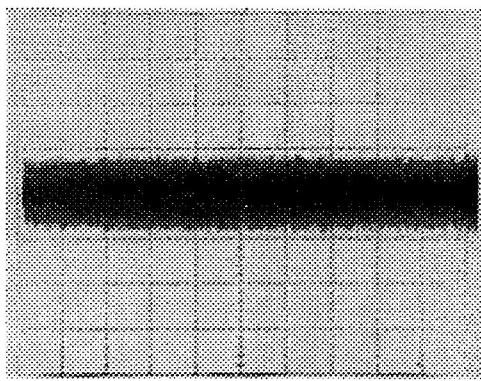

6.3.17 WBL Focus Offset Adjustment

Adjustment 2

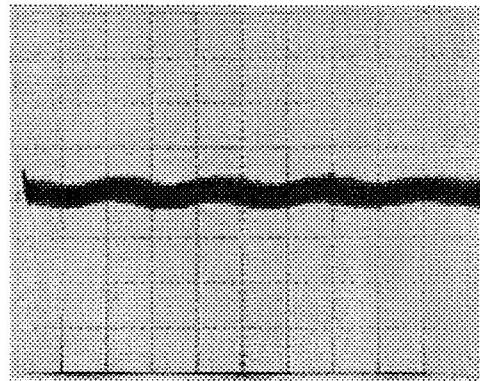

• Objective	To adjust the gain balance of the wobble signal.		
• Symptom when out of adjustment	Player does not record or search or pause CD-R discs.		
• Measurement instrument connections	Connect the oscilloscope to CN104 (TP1), Pin 5 (WBL). [This connection must be via a high-pass filter (180pF+3.9kΩ).] [Settings] 5 mV/div. 20 µS/div. DC mode	• Player state Test mode, play	VR115 (WFE. OFS) (HEAD BOARD assy)
	• Adjustment location	STD-R03	• Disc

[Procedure]

- (1) Move the pickup to midway across the disc ($R = 35\text{mm}$) with the MANUAL / TRACK SEARCH FWD $\blacktriangleright\blacktriangleright\blacktriangleright$ or REV $\blacktriangleleft\blacktriangleleft$ keys.
- (2) Press the FINALIZE key, the PLAY \blacktriangleright key, then the PAUSE \blacksquare key in that order to close the respective servos and put the player into play mode.
- (3) Press the DISPLAY OFF key to light up the DISPLAY OFF KEY LED.
- (4) Adjust VR115 (WFE. OFS) so that the amplitude of waveform at CN104 (TP1), Pin 5 (WBL) is minimum.

Out of adjustment

Optimum adjustment

6.3.18 Recording Power Adjustment

Adjustment 2

• Objective	To optimize the recording power of the laser diode.		
• Symptom when out of adjustment	The player does not record nor playback self-recorded discs. It also skips tracks and the RF waveform is dirty. (No problem during CD playback)		
• Measurement instrument connections	Connect the multimeter to CN104 (TP1), Pin 7 (PWAJT).	• Player state Test mode, maximum recording power ON VR104 (REC. PW) (HEAD BOARD assy) • Adjustment location • Disc	None needed

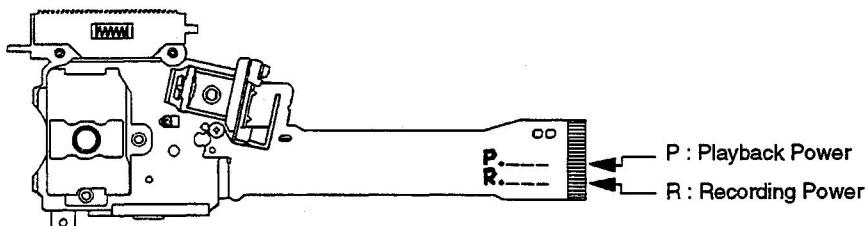

[Procedure]

When Adjusting with the multimeter

- (1) Fully turn VR104 (REC. PW) counterclockwise to reduce the power to the minimum.
- (2) Press REC  and REC MUTE  keys in this order to lights up the laser diode.
- (3) Adjust the voltage value of Pin 7 (PWAJT) of CN104 (TP1) to the voltage value (REC. PW voltage $\pm 10\text{mV}$) displayed on the pickup flexible cable using VR104 (REC. PW).

Notes:

- Power more than ten times greater than playback power is released during these adjustment.
Never look directly at the objective lens.
- This adjustment cannot be performed accurately if disc is set. Be sure to remove disc first before adjustments.
- Perform this adjustment more than two minutes after starting up the test mode (after inserting the AC plug).
- The laser diode may be damaged if the recording power is greater than the specified value.
Always perform step 1 before making adjustments and be careful not to exceed the adjustment value by more than 50mV (specified value in step 3).

Reference : When adjusting with optical power meter.

- (1) Fully turn VR104 (REC. PW) counterclockwise to reduce the power to the minimum.
- (2) Move the pickup to the outer edge of the disc with the MANUAL / TRACK SEARCH FWD    key.
- (3) Press REC  and REC MUTE  keys in that order to lights up the laser diode.
- (4) Shine the light discharged from the objective lens in the pickup on the light power meter sensor and adjust VR104 (REC. PW) so that the recording laser diode output is an average of $4.7\text{mW} \pm 0.1\text{mW}$ (Wavelength 790nm, Average mode).

Notes:

- Perform this adjustment more than two minutes after starting up the test mode (after inserting the AC plug).
- The laser diode may be damaged if the recording power is greater than the specified value.
Always perform step 1 before making adjustments and be careful not to exceed the adjustment value by more than 0.3mW (specified value in step 3).
- Power more than ten times greater than playback power is released during these adjustment.
Never look directly at the objective lens.

6.3.19 HF Amp. Gain Adjustment

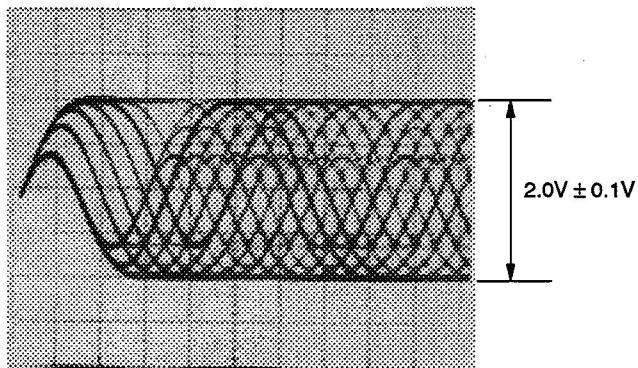

Adjustment 2

• Objective	To correct the discrepancy in the HF level with the pickup.		
• Symptom when out of adjustment	Player does not record, track search is impossible.		
• Measurement instrument connections	Connect the oscilloscope to CN104 (TP1), Pin 8 (HF). [Settings] 50 mV/div. 500 nS/div. DC mode	• Player state • Adjustment location • Disc	Test mode, play VR119 (HF. GAIN) (HEAD BOARD assy) STD-903

[Procedure]

- (1) Move the pickup to midway across the disc ($R = 35\text{mm}$) with the MANUAL / TRACK SEARCH FWD $\blacktriangleright\blacktriangleright\blacktriangleright$ or REV $\blacktriangleleft\blacktriangleleft$ keys.
- (2) Press the FINALIZE key, the PLAY \blacktriangleright key, then the PAUSE \blacksquare key in that order to close the respective servos and put the player into play mode.
- (3) Line up bright line (ground) at the center of the oscilloscope screen and put the oscilloscope into DC mode.
- (4) Adjust VR119 (HF. GAIN) so that the amplitude of waveform at CN104 (TP1), Pin 8 (HF) is $2.0\text{V} \pm 0.1\text{V}$.

Note : Adjust after checking that the DISPLAY OFF KEY LED is OFF.

6.3.20 Focus Servo Loop Gain Adjustment

Adjustment 2

• Objective	To optimize the focus servo loop gain.		
• Symptom when out of adjustment	Playback does not start or focus actuator noisy.		
• Measurement instrument connections	<p>See Fig.6. (SERVO UCOM BOARD assy)</p> <p>[Settings] CH1 : 0.1 V/div. X-Y mode CH2 : 10 mV/div.</p>	<p>• Player state</p> <p>• Adjustment location</p> <p>• Disc</p>	<p>Test mode, play</p> <p>VR201 (FCS. GAIN) (SERVO UCOM BOARD assy)</p> <p>STD-903</p>

[Procedure]

- (1) Set the AF generator output to 1.4kHz and 1Vp-p.
- (2) Move the pickup to midway across the disc (R = 35mm) with the MANUAL / TRACK SEARCH FWD $\blacktriangleright\blacktriangleright\blacktriangleright$ or REV $\blacktriangleleft\blacktriangleleft$ keys.
- (3) Press the FINALIZE key, the PLAY \blacktriangleright key, then the PAUSE \blacksquare key in that order to close the respective servos and put the player into play mode.
- (4) Adjust VR201 (FCS. GAIN) so that the lissajous waveform is symmetrical about X axis and the Y axis.

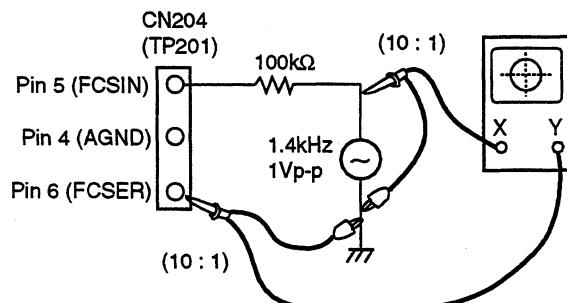

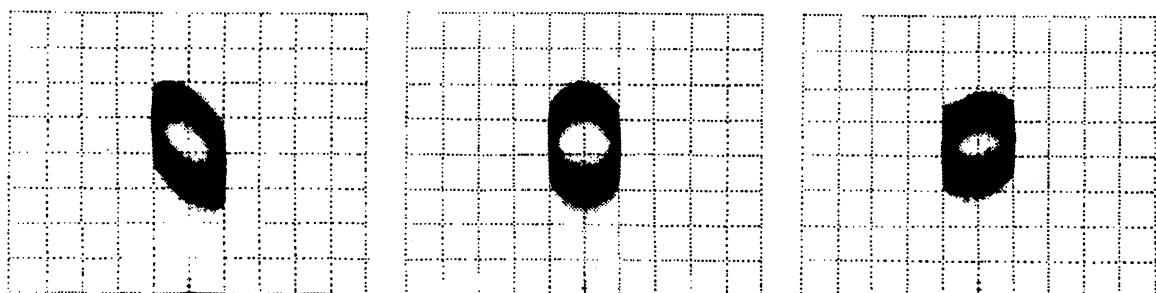

Fig. 6

Higher gain

Optimum gain

Lower gain

6.3.21 Tracking Servo Loop Gain Adjustment

Adjustment 2

• Objective	To optimize the tracking servo loop gain.		
• Symptom when out of adjustment	Playback does not start, during searches the actuator is noisy, or tracks are skipped.		
• Measurement instrument connections	<p>See Fig.7. (SERVO UCOM BOARD assy)</p> <p>[Settings] CH1 : 0.1 V/div. X-Y mode CH2 : 10 mV/div.</p>	<p>• Player state Test mode, play</p> <p>• Adjustment location VR202 (TE. GAIN) (SERVO UCOM BOARD assy)</p> <p>• Disc STD-903</p>	

[Procedure]

- (1) Set the AF generator output to 1.2kHz and 2Vp-p.
- (2) Move the pickup to midway across the disc ($R = 35\text{mm}$) with the MANUAL / TRACK SEARCH FWD $\blacktriangleright\blacktriangleright\blacktriangleright\blacktriangleright$ or REV $\blacktriangleleft\blacktriangleleft\blacktriangleleft\blacktriangleleft$ keys.
- (3) Press the FINALIZE key, the PLAY \blacktriangleright key, then the PAUSE \blacksquare key in that order to close the respective servos and put the player into play mode.
- (4) Adjust VR202 (TE. GAIN) so that the lissajous waveform is symmetrical about X axis and the Y axis.

(1) Pin Function

Pin No.	Mark	Name	I/O	Initial	Function
1	P43/AD3	AD3	I/O	—	Data address line
2	P44/AD4	AD4	I/O	—	
3	P45/AD5	AD5	I/O	—	
4	P46/AD6	AD6	I/O	—	
5	P47/AD7	AD7	I/O	—	
6	P50/A8	A8	O	—	Address line
7	P51/A9	A9	O	—	
8	P52/A10	A10	O	—	
9	P53/A11	A11	O	—	
10	P54/A12	A12	O	—	
11	P55/A13	A13	O	—	Address line
12	NC	GND	—	—	Not used
13	P56/A14	A14	O	—	
14	P57/A15	A15	O	—	
15	Vdd	+5V	—	—	Positive power supply voltage
16	AVss	GND	—	—	A/D converter GND
17	P70/AN0	XOPEN	I	—	OPEN SW. "L" when open is completed
18	P71/AN1	XCLMP	I	—	CLAMP SW. "L" when clamp DOWN
19	NC	GND	—	—	Not used
20	P72/AN2	GND	I	—	
21	P73/AN3	GND	I	—	
22	P74/AN4	TEPP	I (A)	—	Tracking error peak to peak (For tracking gain adjustment)
23	P75/AN5	RFT	I (A)	—	Playback RF upper envelope
24	P76/AN6	RFB	I (A)	—	Playback RF lower envelope
25	P77/AN7	MACK	I	—	"L" when opposite mode controller serial handshake is input
26	AVref	+5V	—	—	A/D converter reference voltage input
27	AVdd	+5V	—	—	A/D converter analog power supply
28	Vdd	+5V	—	—	Positive power supply pin
29	P20/NM1	XPFAIL	I	—	"L" when power failure is detected. ↓ detection
30	P21/INTP0	FG	I	—	Spindle FG ↓ detection
31	P22/INTP1	SCOR	I	—	EFM decoder frame sync ↓ detection
32	P23/INTP2	ATIP	I	—	ATIP sync ↑ ↓ detection
33	P24/INTP3	ESYN	I	—	EFM encoder frame sync ↓ detection
34	P25/INTP4	XRFDT	I	—	"L" when EFM playback RF detected. ↓ detection
35	P26/INTP5	TOCP	I	—	TOC position sensor (For slider stop processing at TOC position (=L))
36	P27/INTP3/TI	SENS	I	—	SONY servo IC SENS signal (For details, refer to 7. Timing Chart.)
37	NC	GND	—	—	Not used
38	P30/TxD	FOK	I	—	Focus OK input ("H" when Focus OK)
39	P31/RxD	XECE	O	H	"L" when test tool reading enable is output
40	P32/SO/SBO	MSO	O	L	Clock sync serial transformer data output

Note) "A" in the I/O column indicates analog.

Pin No.	Mark	Name	I/O	Initial	Function
41	P33/SI/SBI	MSI	I	L	Clock sync serial transfer data input
42	P34/SCK	MSCK	O	H	Clock sync serial transfer clock output
43	NC	GND	-	-	Not used
44	P80/T000	XFUSE	I	H	"L" when communication between LC89585 \leftrightarrow Mode controller
45	P81/T001	GFS	I	-	GFS input ("H" when GFS OK)
46	P82/T002	ECLV	O	H	Spindle servo EFM/Wobble CLV mode
47	P83/T003	CLV	O	H	Spindle servo CLV/CAV mode
48	P84/T010	SPSQ	O	-	Spindle drive PWM output during spindle CAV
49	P85/T001	MREQ	O	H	"L" when opposite mode controller serial handshake is output
50	RESET	XRST	I	-	"L" when reset input
51	X1	CLOCK	I	-	System clock oscillation crystal connection pin
52	X2	CLOCK	-	-	Input to X1 pin when clock is supplied from outside
53	NC	GND	-	-	Not used
54	Vss	GND	-	-	GND pin
55	WDTO	NC	O	L	Not used
56	P00/RTP0	XSUBQE	O	H	"L" when EFM decoder sub code Q reading is enabled
57	NC	GND	-	-	Not used
58	P01/RTP1	XENCE	O	L	"H" when LC89585 serial enable is output
59	P02/RTP2	XASYN	O	L	ATIP frame sync "L"
60	P03/RTP3	XEXSC	O	H	"L" when LC89585 external sync enable is output
61	P04/RTP4	SSO	O	L	SONY servo IC command special serial data output
62	P05/RTP5	SSCK	O	H	SONY servo IC command special serial clock output
63	P06/RTP6	XLT	O	H	"L" when SONY servo IC command is latched
64	P07/RTP7	RECE	O	L	"H" when laser diode recording power is on
65	EA	EA	I	-	Used as internal ROM mode when connected to +5V
66	Vss	GND	-	-	GND pin
67	P93/TMD	RAME	O	H	"H" when external SRAM is enable
68	P92/TAS	XSVRST	O	L	"L" when servo system IC mode control reset is output
69	P91/WR	XWR	O	L	Strobe signal output for external memory write operations
70	P90/RD	XRD	O	L	Strobe signal output for external memory read operations
71	ASTB	ASTB	O	-	Signal which latches lower address signal for external memory access externally
72	P40/ADD	AD0	I/O	-	Data address line
73	P41/AD1	AD1	I/O	-	
74	P42/AD2	AD2	I/O	-

49	POA3	LDPW3	O	L	
50	POA4	LDPW4	O	L	
51	POA5	SSEL	O	L	"L" when tracking error envelope detection is reset
52	POA6	—	O	L	Not used
53	POA7	LJUMP	O	L	"H" during N track jump
54	POB0	LIN	O	L	"H" during loading close
55	POB1	LOUT	O	L	"H" during loading open
56	POB2	KOJK	O	L	Optical axis switching circuit ON/OFF
57	POB3	EECS	O	L	EEPROM data writing and reading enable output
59	POB4	—	O	L	Not used
60	POB5	FC_OST	O	L	Focus offset switching output. During search: L. Other than search: H
61	POB6	STCN1	O	L	Strategy control output 1
62	POB7	STCN2	O	L	Strategy control output 2
63	POC0	TEG0	O	L	LSB Tracking error amplifier gain adjustment
64	POC1	TEG1	O	L	
65	POC2	TEG2	O	L	
66	POC3	TEGM	O	L	
67	POC4	DIRC	O	H	"L" when SONY servo IC DIRC is output
69	POC5	XCDMIR	O	H	Mirror detection circuit selection SW CD_R/—CD
70	POC6	XLDON	O	H	Laser diode OFF/—ON
71	POC7	AMUTE	O	H	Audio final stage mute H (According to mode controller instructions) Turns mute ON during REC PAUSE, when input selector is switched, and during STOP

PDR-04 switches the record EFM in accordance with the characteristic of CD-R disc.

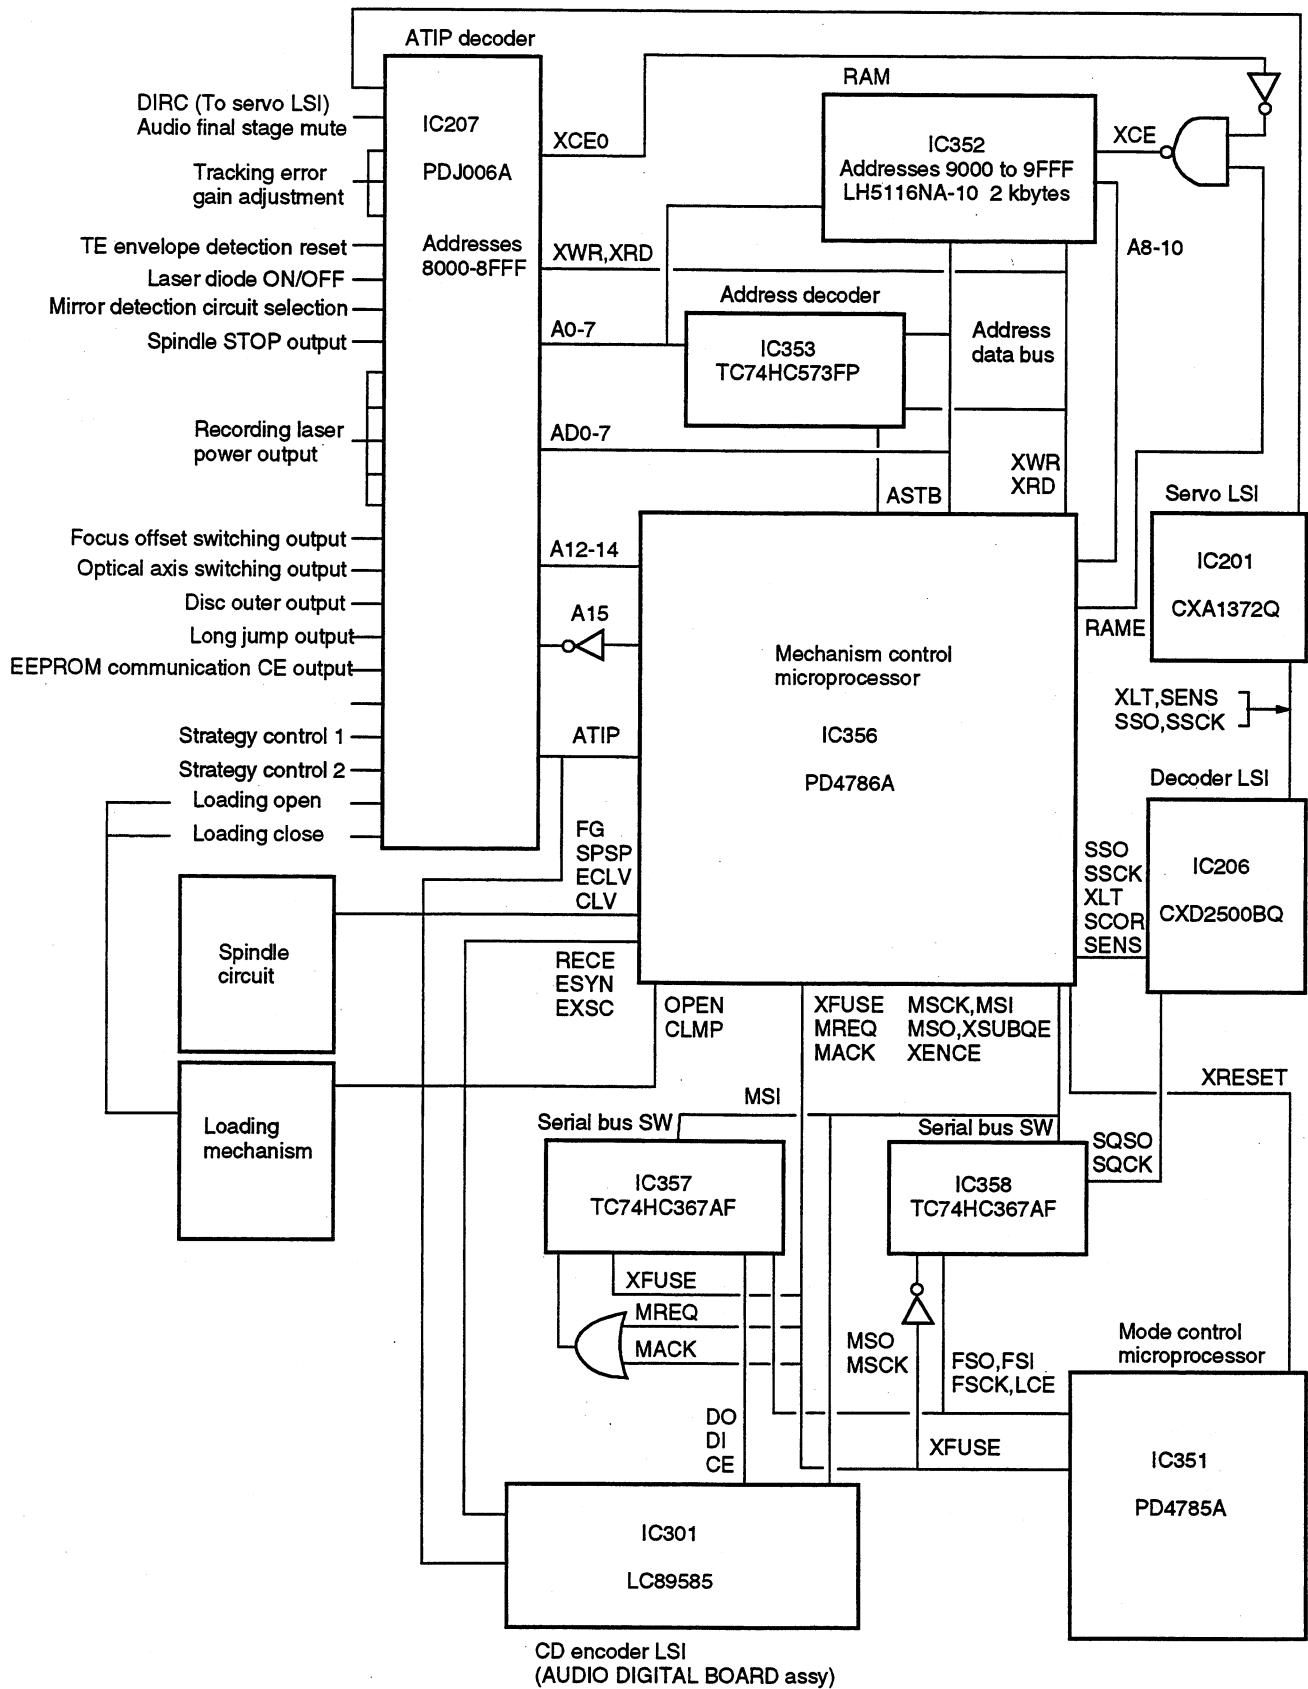

Pulse has four varieties (strategy) which is controlled by strategy control output 1 and 2 (STCN1, STCN2).

Logical setting table of STCN1 and STCN2

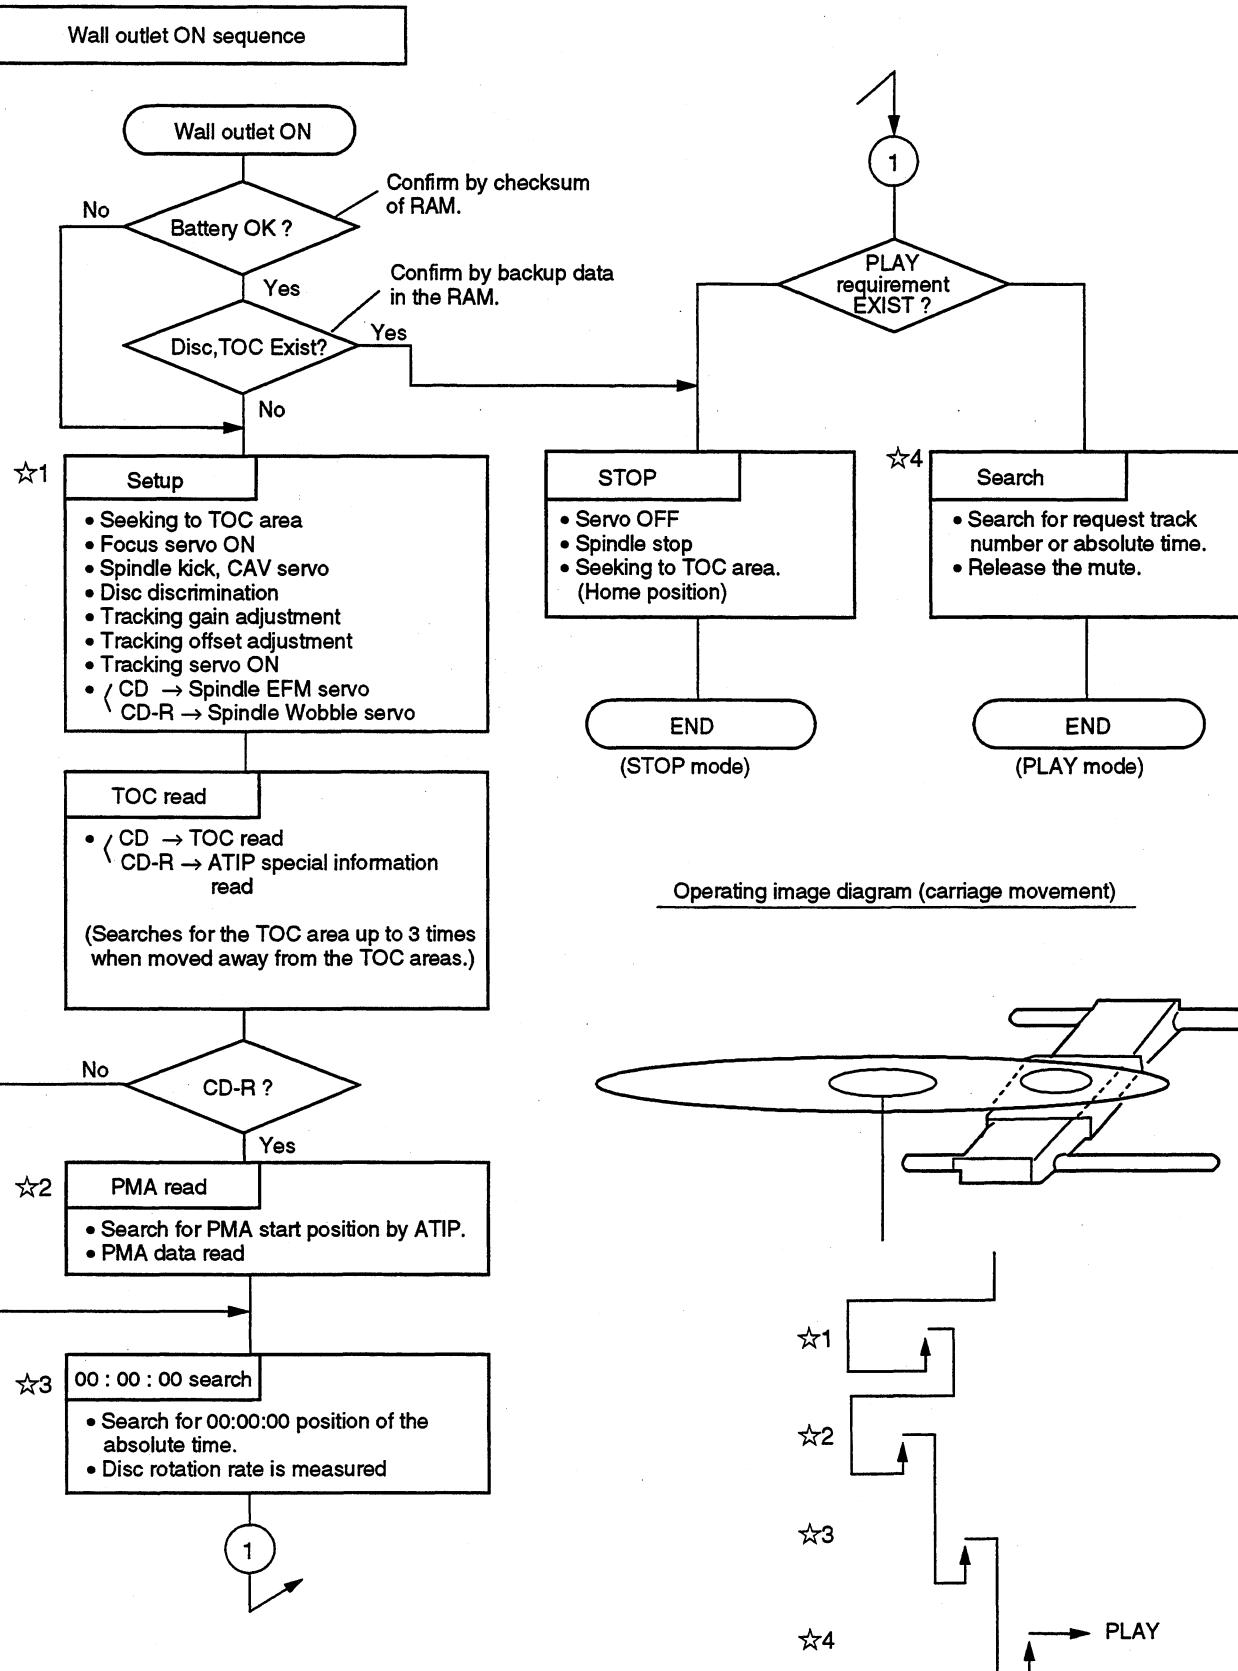

STCN1	STCN2	Strategy Type
0	0	EFM1
0	1	EFM2
1	0	EFM3
1	1	EFM4

Note) In the Test mode, "EFM2" is selected only.

(5) Operating Flow Chart (2)

Operating image diagram

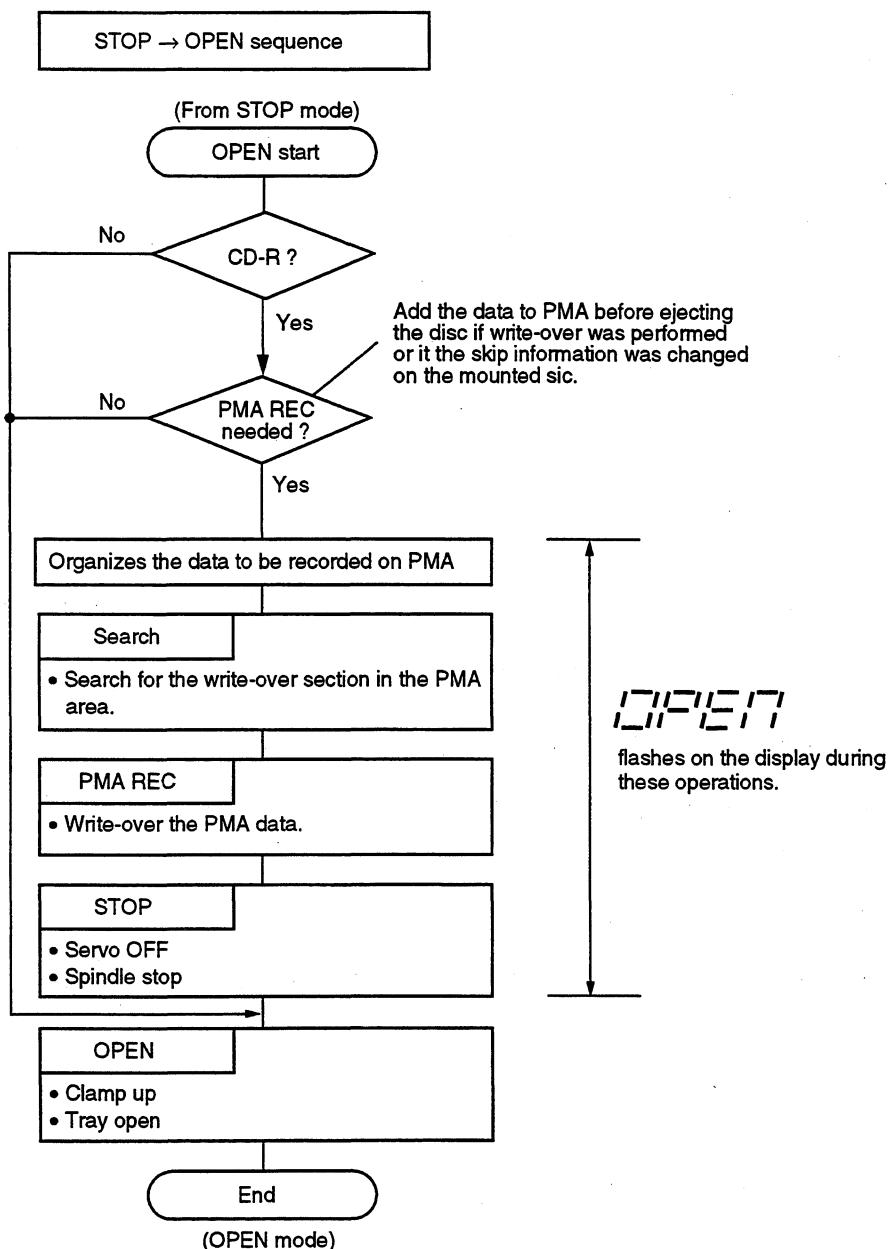

Tracking error waveforms

(6) Operating Flow Chart (3)

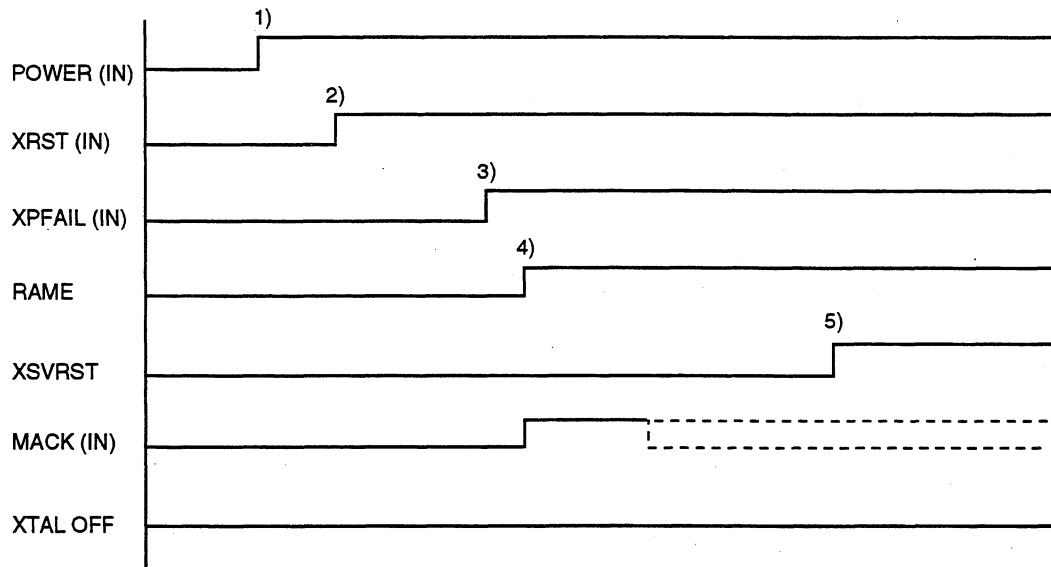

(7) Operating Flow Chart (4)

PDR-04

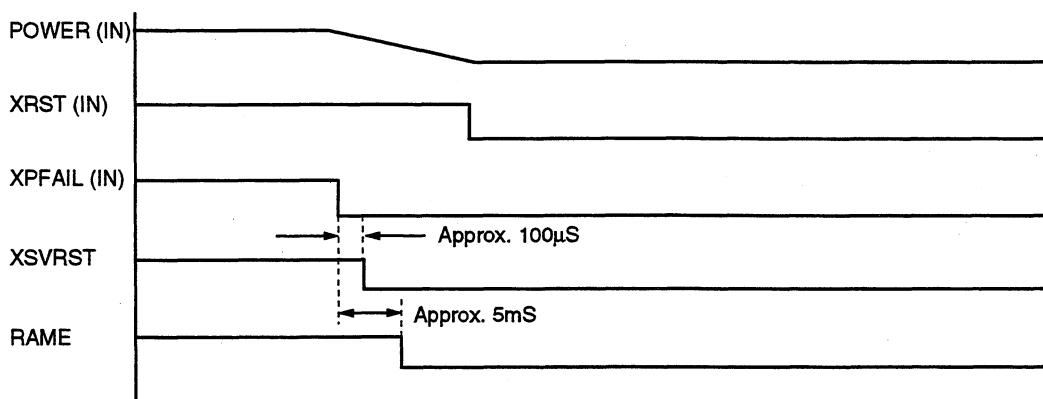

(8) Timing Chart

① Timing Chart when Power ON (Outlet ON)

- 1) Power turns on.
- 2) XRST becomes H and reset is turned off.
- 3) After reset is turned off, wait for XPFAIL to become H.
- 4) After XPFAIL becomes H, the microprocessor starts.
RAME becomes H, and the external SRAM is set to the enable state.
- 5) XSVRST becomes H, and servo circuit operations start.

② Timing Chart when Power Failure

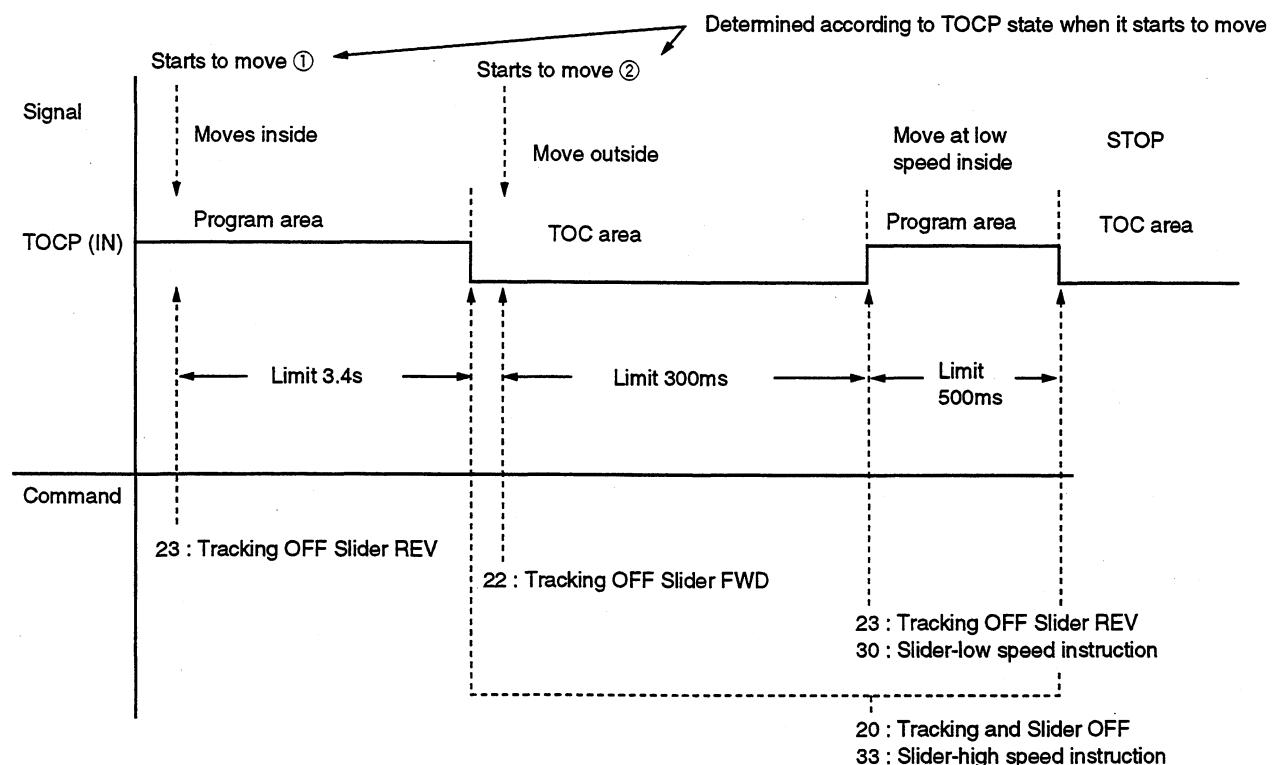

- 1) The power starts dropping and after a certain point, XPFAIL becomes L.
- 2) When XPFAIL becomes L, an internal interrupt is imposed, and the current operation mode and disc data are backed up.
- 3) At the same time, XSVRST becomes L, servo is reset, RAME is set to L, and the external SRAM is set to the disable state.
- 4) XRST then becomes L, and reset is set.

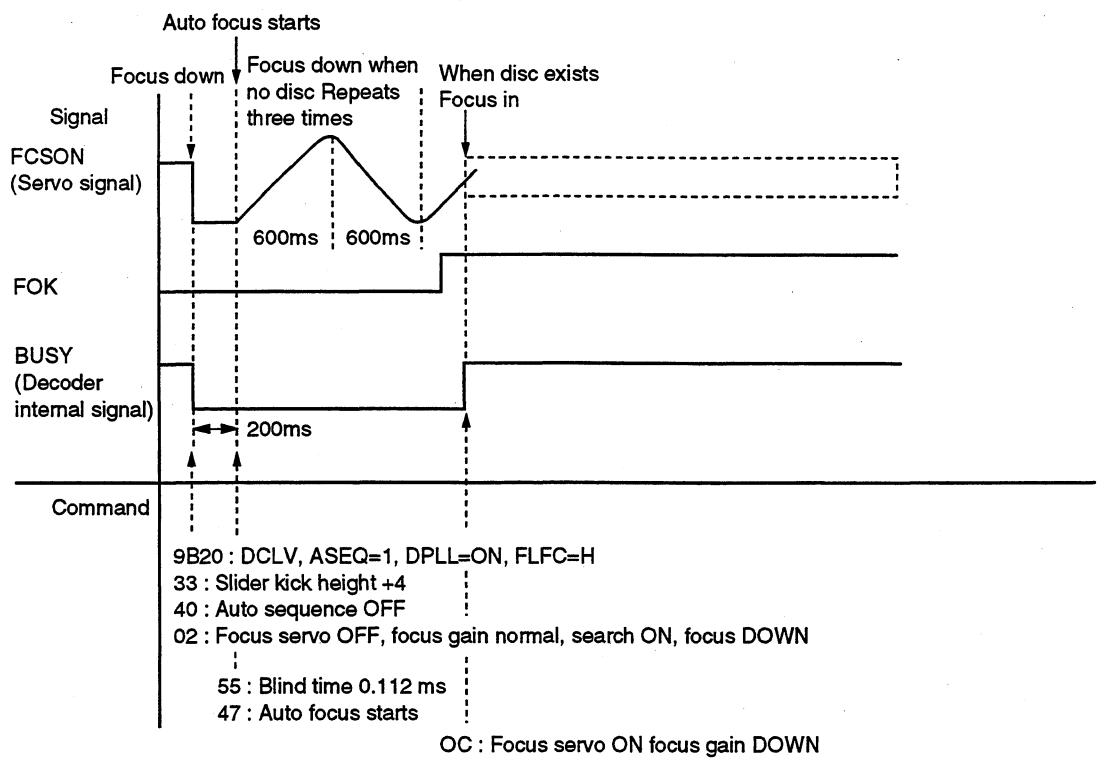

Note : If XRST becomes L first before RAME becomes L, the value of the backup RAM (IC352) will not be stored properly.

③ Seek Track 0

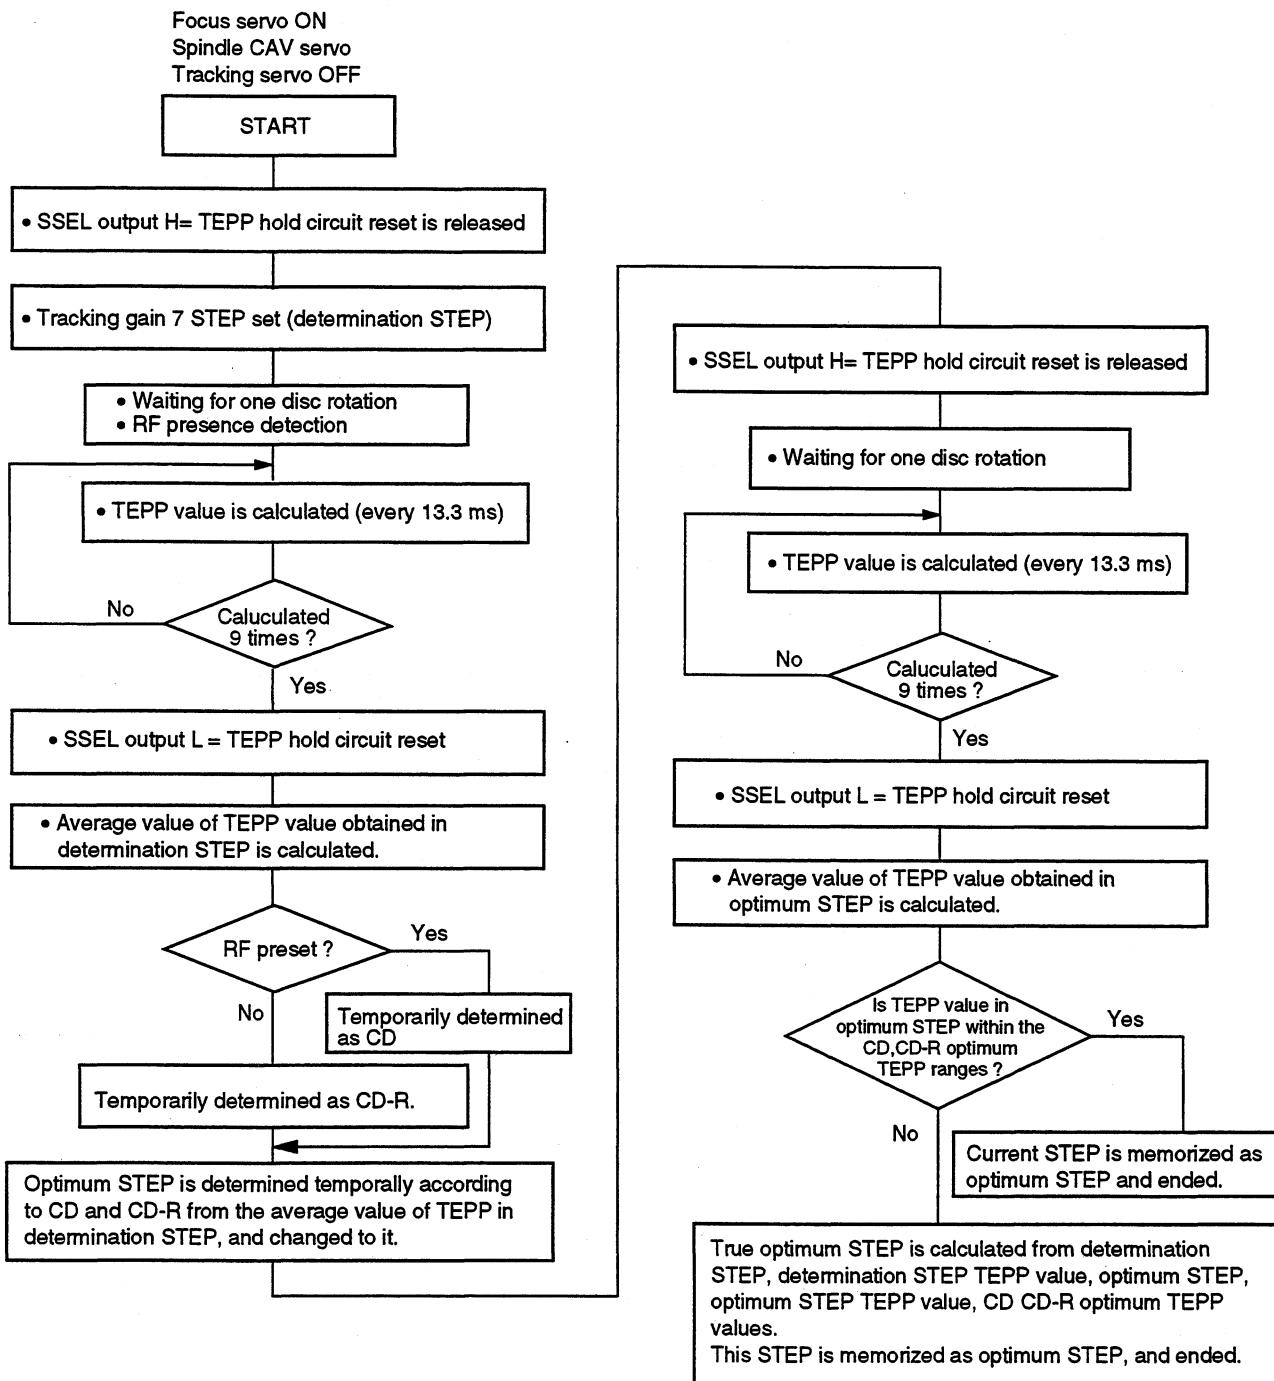

Carriage is moved to TOC area (Home position).

④ Focus ON

(9) Tracking Error Gain Adjustment Flow Chart

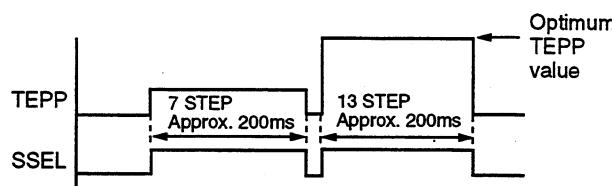

Reference :True optimum STEP =

Determination STEP – Optimum STEP

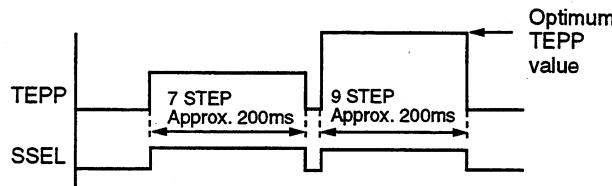

$$= \frac{\text{TEPP value of determination STEP} - \text{Optimum STEP TEPP value}}{(\text{CD, CD-R optimum TEPP value} - \text{optimum STEP TEPP value}) + \text{Optimum STEP}}$$

(10) Tracking Gain Adjustment Timing ChartOptimum TEPP value : $2.494V \pm 0.103V$ (2.372 to 2.649V)

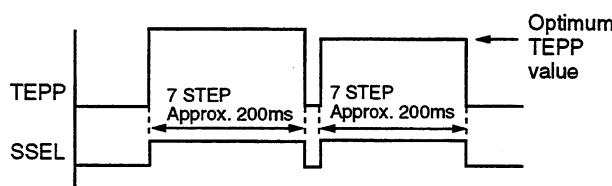

- 1) Example of increasing gain to maximum after disc gain became low

- 2) Example of increasing gain after disc gain became low

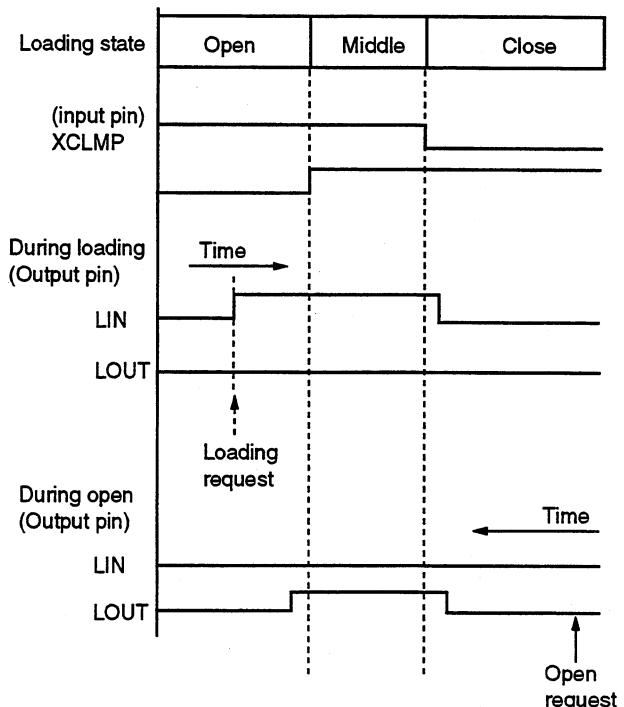

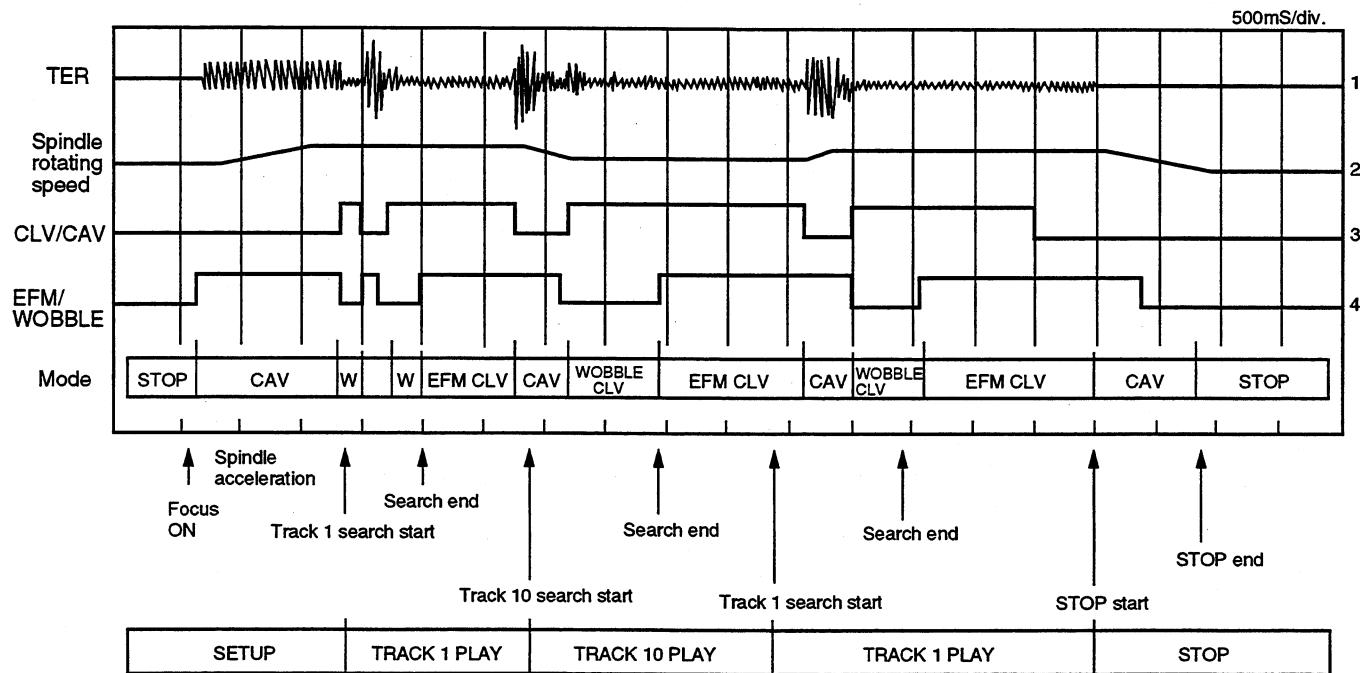

- 3) Example of decreasing gain to minimum after disc gain became high

PDR-04

(2) System serial communication

The mode controller performed serial communication between the mechanism controller and LC89585 (digital interface LSI) and PDC020A (FS converter LSI).

The mechanism controller also performed communication with LC89585 at the following timings.

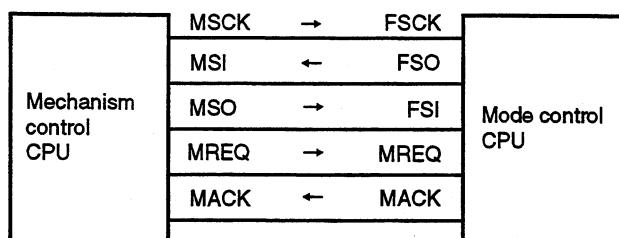

- ① Communication request from mechanism controller.
- ② Mechanism/mode controller communication
- ③ Communication with mode controller/LC89585
During this time, XFUSE is set to L and serial communication of mechanism controller is disabled.
- ④ Serial communication with mode controller/LM1972M
- ⑤ Communication with mechanism controller/LC89585

(3) Communication with Mechanism Controller and Mode Controller

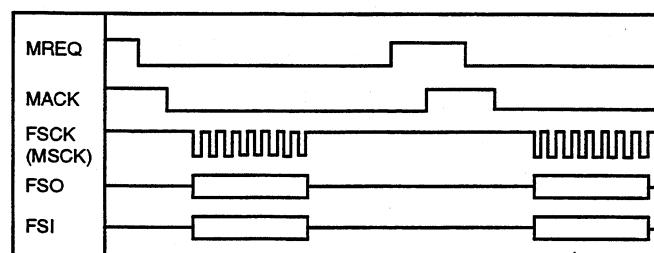

Communication Format

This CPU and the mechanism control CPU performed serial communication with 5 signal lines.

- FSCK Serial transmission clock (1 MHz)
- FSI/FSO Serial data transmission line
- MREQ/MACK Handshake line

The communication timing is control by the mechanism control CPU. 13 byte data is transmitted every 13.33 to 40 ms. (Average:13.33 msec)

Communication is performed by the following procedure.

- ① The MREQ signal becomes L as communication request from the mechanism control microprocessor.
- ② This microprocessor sets the MACK signal to L as communication enable signal.
- ③ The mechanism controller sets the MREQ signal to H after 1 byte serial transmission.
- ④ This microprocessor sets MACK to H if serial transmission has ended normally.
- ⑤ Hereafter ① to ④ are repeated until the 13 byte data transmission has completed.

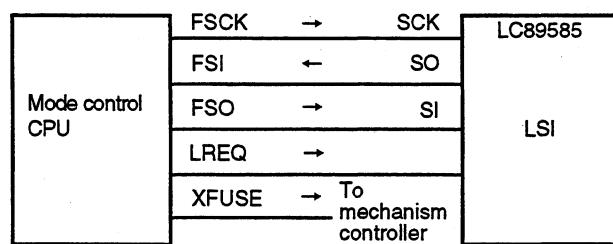

※ The mechanism controller and mode controller observes the state of the other side's control line, and stops communication processing of transmission if conditions are not satisfied after a certain time.

(4) Communication with digital interface LSI (LC89585, IC301)

Communication format

Communication with the digital interface LSI is performed using four lines.

XFUSE is set to L during communication so that there are no clashes with the mechanism controller.

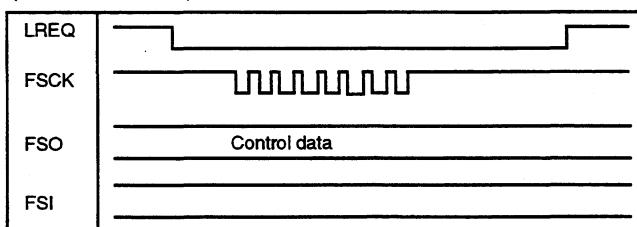

- FSCK Serial transmission clock (1 MHz)
- FSI/FSO .. Serial data transmission line
- BLREQ ... Data enable
- XFUSE L when the mode controller is using the communication line

Communication is performed in one main routine.

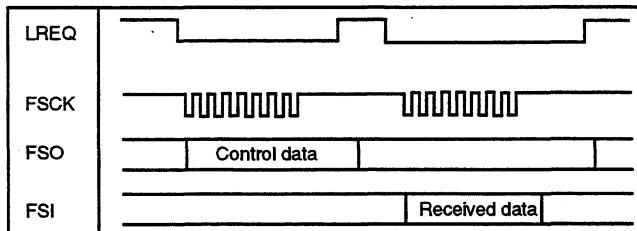

The communication timing is controlled by the mode controller.

No transmission is performed during communication between the mechanism controller and LC89585.

(Command control)

(Data reading)

(5) Communication with Analog Input ATT LSI (LM1972M)

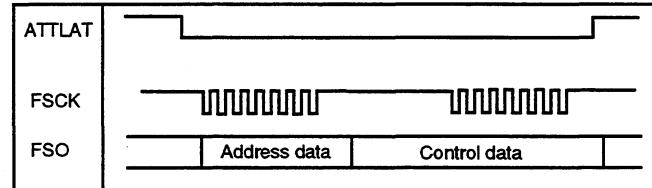

Confirm that the communication is performed by the following procedure.

- FSCK Serial transmission clock (1 MHz)
- FSI/FSO .. Serial data transmission line
- AATLAT Data enable

When analog ATT data is changed, communication is performed in twice in one main routine.

The communication timing is controlled by the mode controller.

(Command control)

94	ATIPSYNC	I	ATIP sync signal input pin
95	SUBSYNC	O	Subcode sync signal output pin
96	CCB	I	CPU interface method selection signal input pin. H : Sanyo CCB format. L : General serial format
97	CE	I	CPU interface chip enable signal input pin
98	CL	I	CPU interface data transfer clock input pin
99	DI	I	CPU interface data input pin
100	DO	O	CPU interface data output pin

■ AK4321-VF (AUDIO DIGITAL BOARD ASSY : IC401)

D/A CONVERTER IC

• Pin Arrangement (Top view)

• Block Diagram

• Pin Function

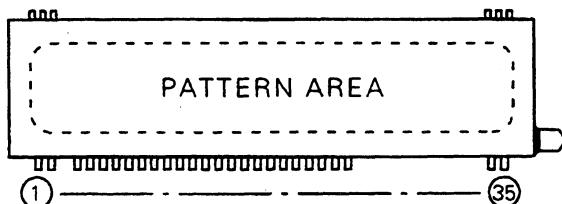

Pin No.	Pin Name	I/O	Function
1	CKS	I	Clock selection At normal speed ; L : XTI= 256fs, H : XTI= 384fs At double speed ; L : XTI= 128fs , H : XTI= 192fs
2	DVDD	-	Digital power supply
3	DVSS	-	Digital ground
4	XTO	O	Crystal resonator output
5	XTI	I	Clock input
6	PD	I	Power down When this pin is set to L, reset the filter and modulator, and it becomes power down state.
7	BICK	I	Serial bit clock 64fs is recommended.
8	SDATA	I	Serial data input 2's complement, MSB first
9	LRCK	I	L/R clock
10	SMUTE	I	Soft mute H: start the soft mute L: release
11	DFS	I	Double speed sampling mode L: Normal speed H: Double speed
12	DEMO	I	Deemphasis mode
13	DEM1	I	It correspond to tri-frequency
14	DIF0	I	Input format
15	DIF1	I	
16	BVDD	-	Power supply
17	AOUTR	O	R ch analog output
18	AOUTL	O	L ch analog output
19	VCOM	O	Common voltage pin, AVDD/2
20	AVDD	-	Analog power supply
21	AVSS	-	Analog ground
22	VREF	I	Reference voltage input The voltage difference between this pin and AVSS pin decide to full scale of D/A output.
23	DZF	O	Zero Input detection pin When the data is input to SDATA pin which is continuously zero for 8192 times on both channels, this pin becomes "H".
24	TTL	I	I/F level selection "L" : CMOS level (DVDD= 2.7V to 5.5V) "H" : TTL level (DVDD= 4.5V to 5.5V)

7.2 DIAGNOSIS

7.2.1 DISASSEMBLY

(1) REMOVE THE TRAY PANEL

Hold the tray panel with your hands as shown in Fig. 1, and grasp the tray with your thumbs and then lift the tray panel up while pulling it toward you with the other fingers. (Fig. 2)

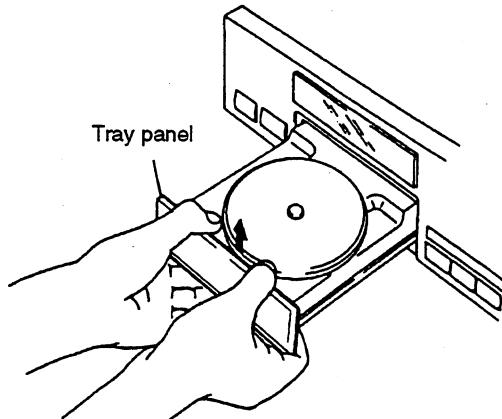

Fig. 1

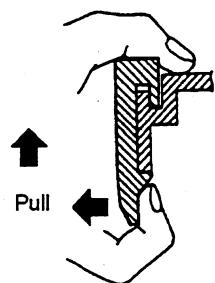

Fig. 2

(2) INSTALL THE TRAY PANEL

Align the tray panel with the grooves located at both edges of the tray. And then press it down till it stops. (Fig. 3)

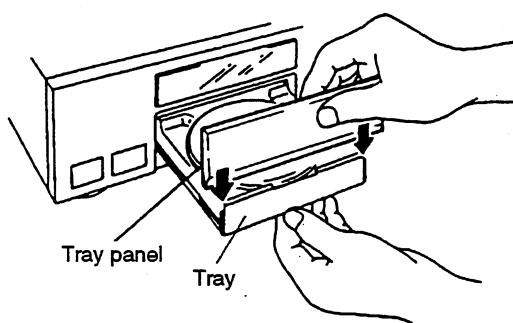

Fig. 3

(3) REMOVE AND SET UP THE HEAD BOARD ASSY

- ① Remove the bonnet.
- ② Remove the tray panel (Refer to section 1).
- ③ Remove the five screws of the front panel.

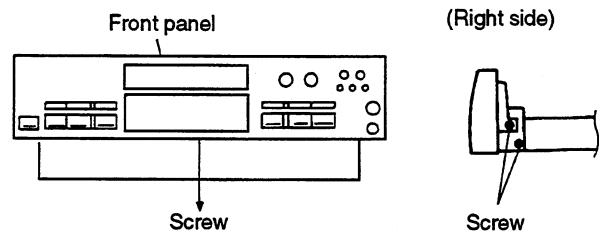

Fig. 4

- ④ Pull out the right side of the front panel to the front and remove the four screws of the board.

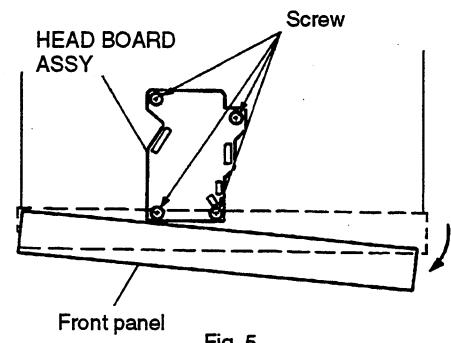

Fig. 5

- ⑤ Remove the fixtures of the wires connected to the board (cord holder, PCB binder).
- ⑥ Place the HEAD BOARD ASSY upright against the slit of the float base.

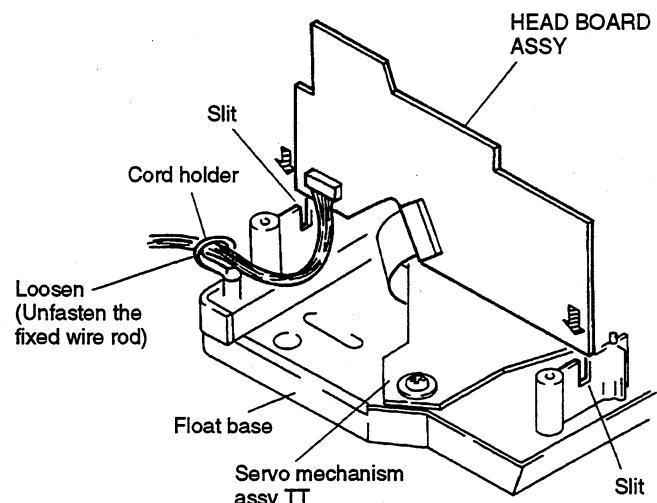

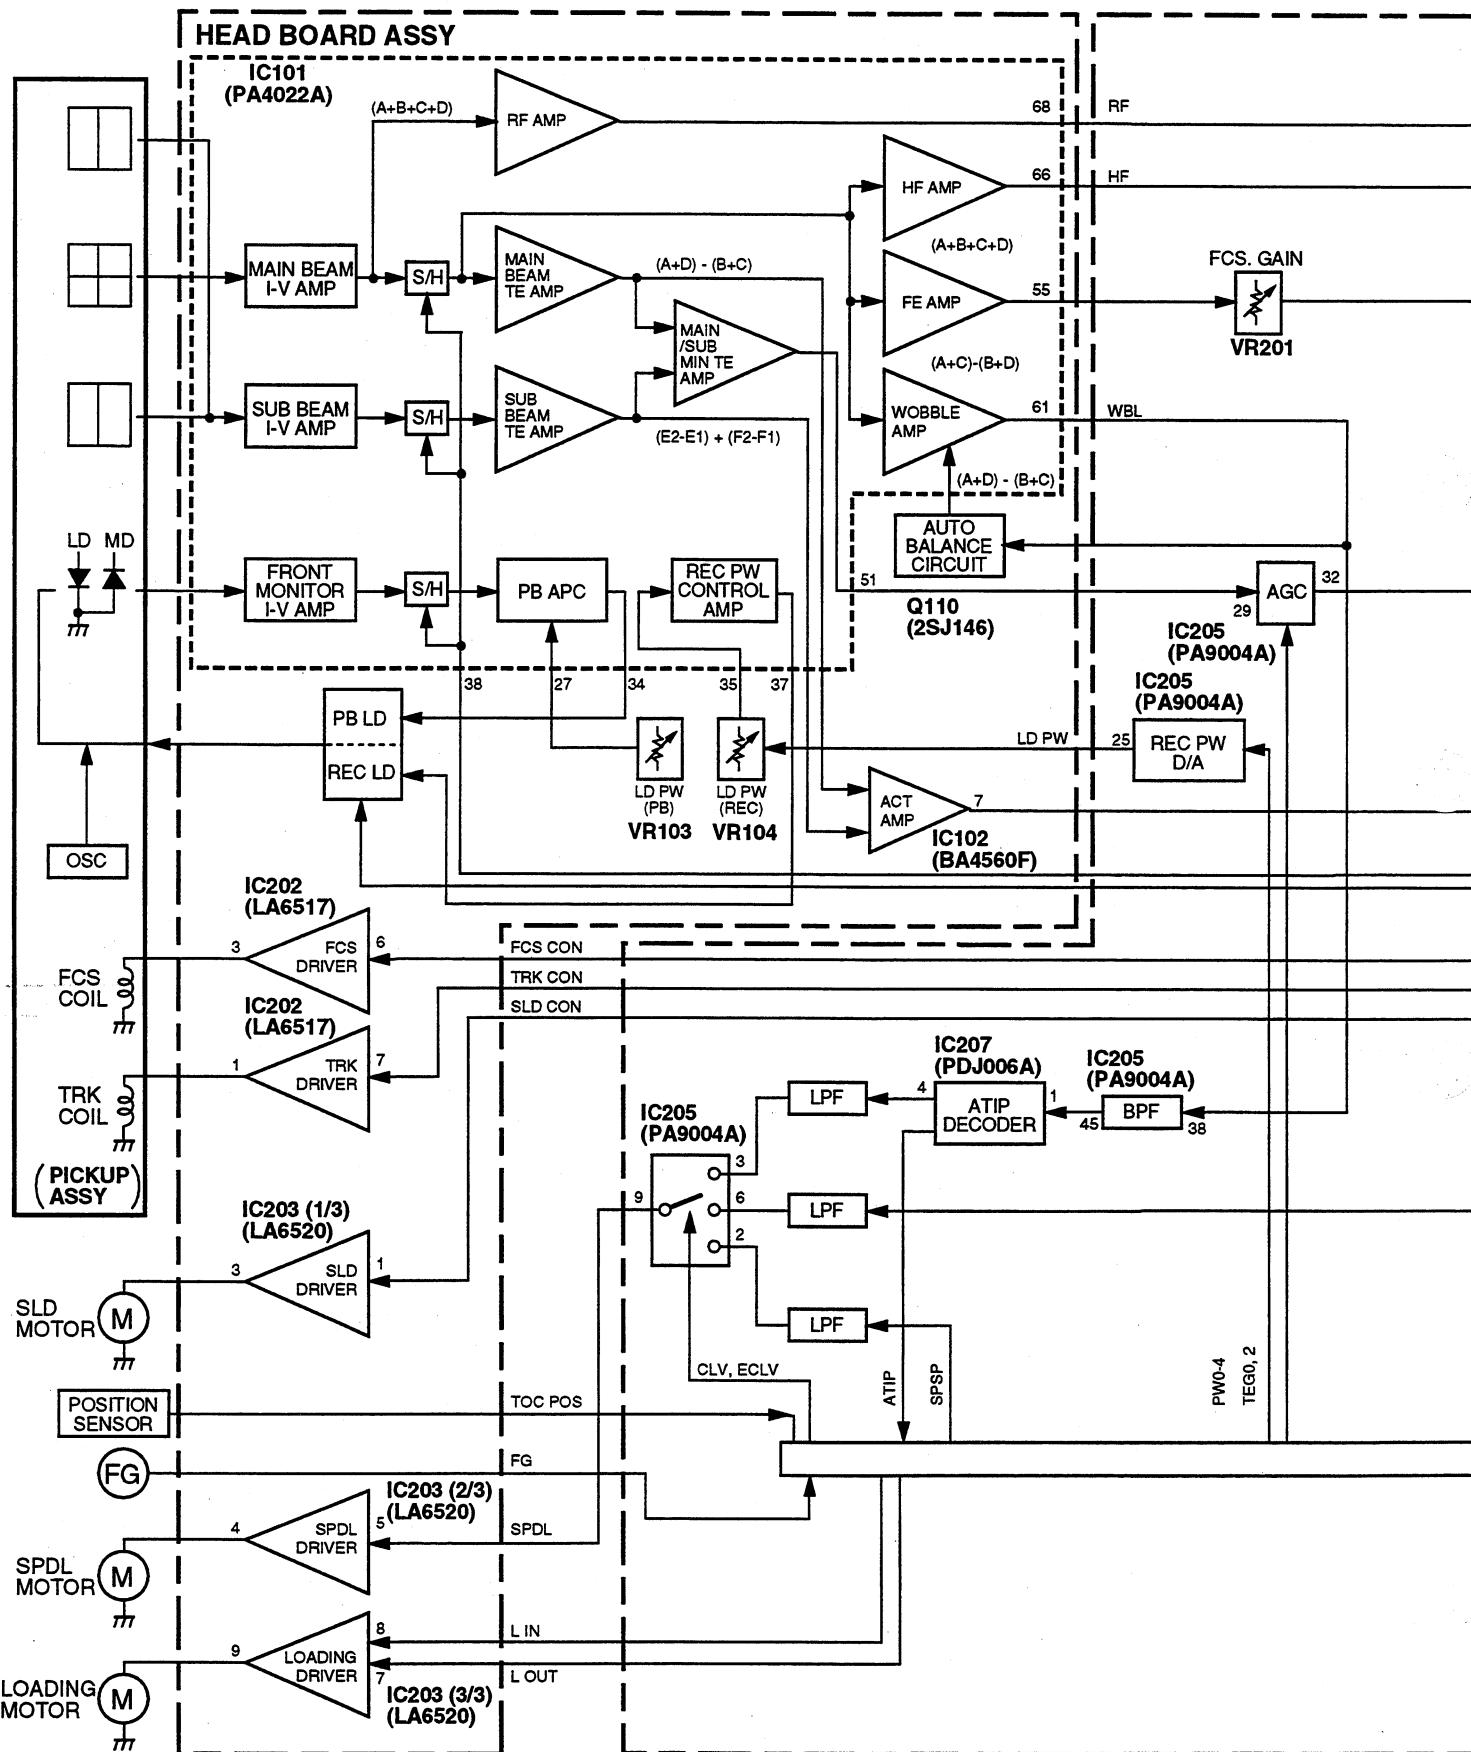

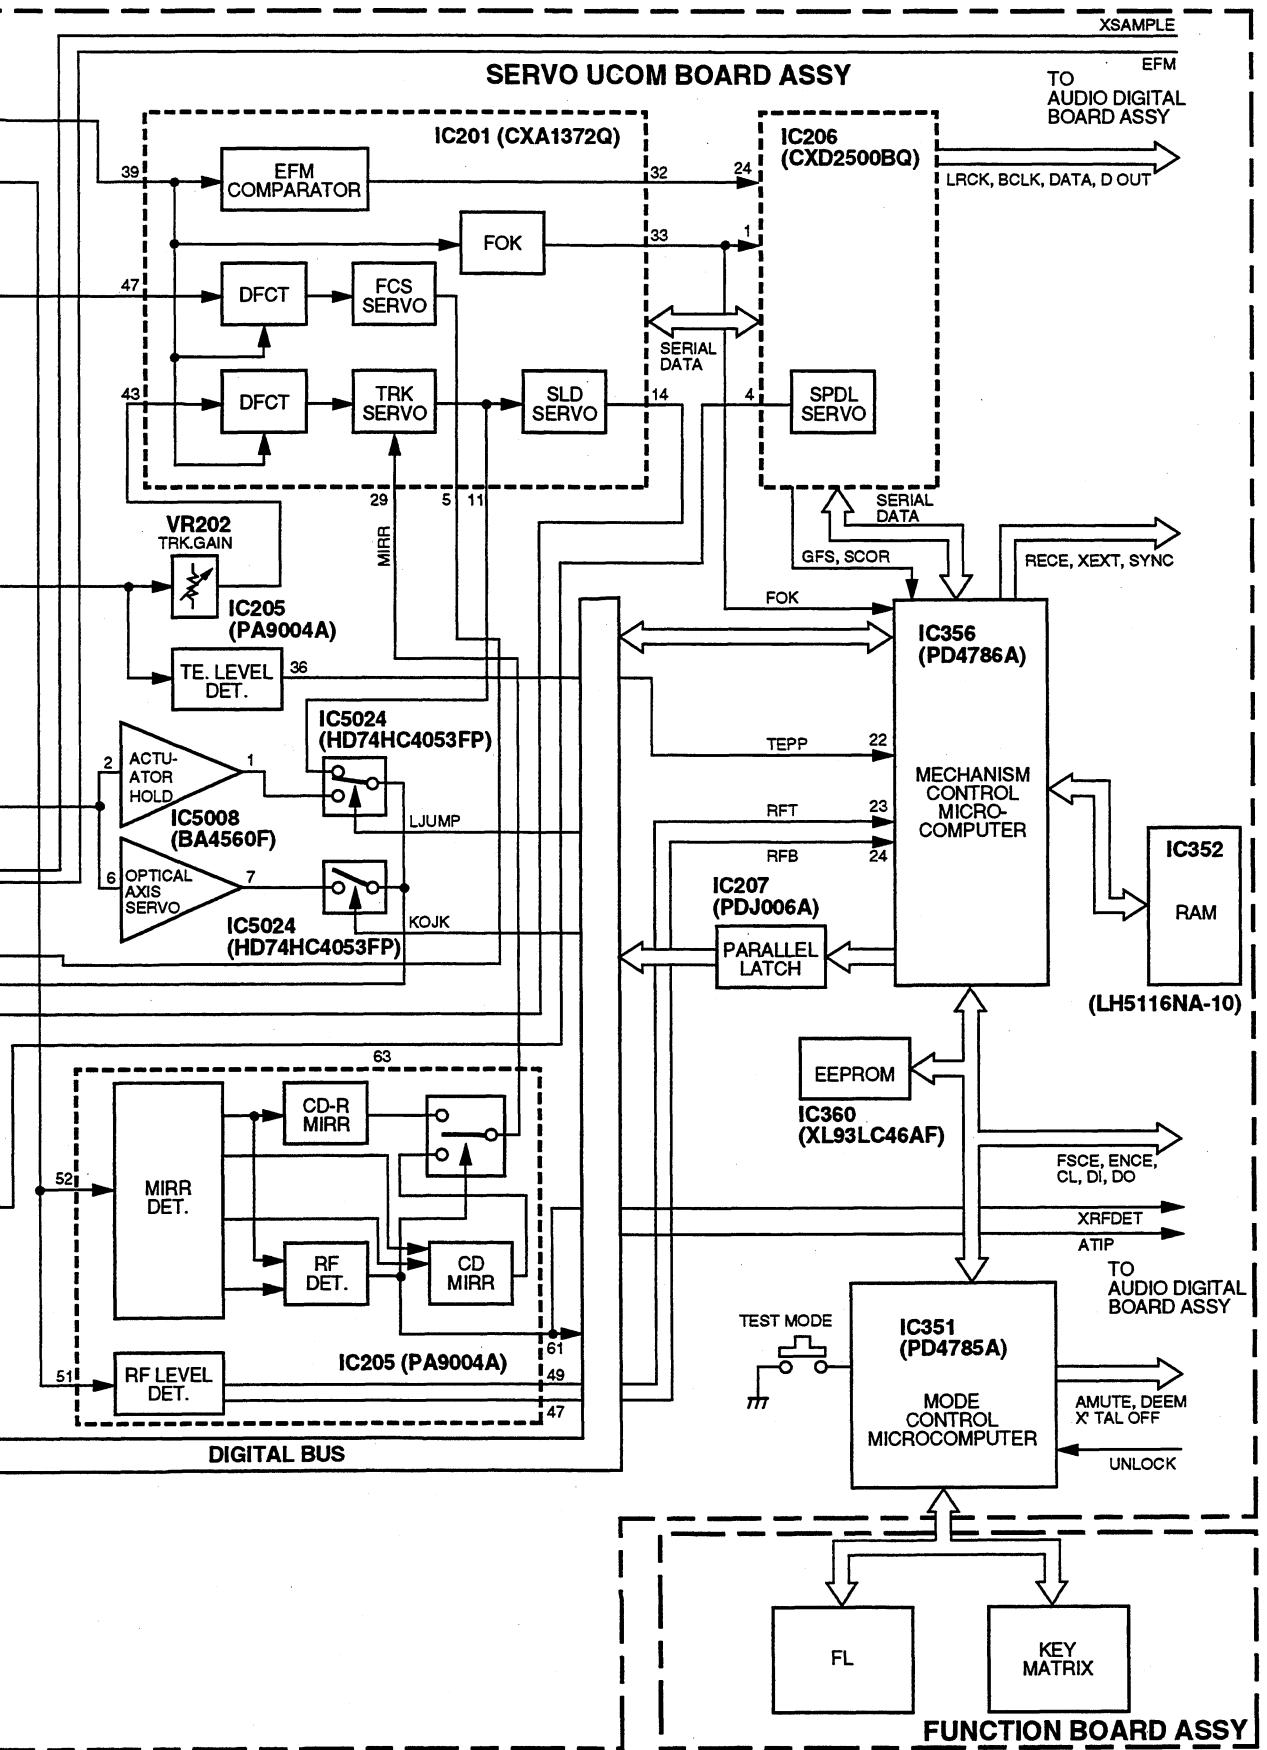

Fig. 6

8. PANEL FACILITIES AND SPECIFICATIONS

■ PANEL FACILITIES

• FRONT PANEL

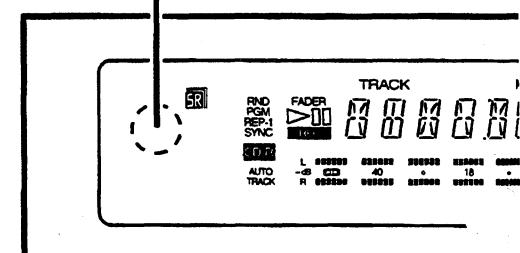

POWER switch and **STANDBY** indicator
(STANDBY/ON)

DISPLAY OFF button and indicator

Remaining recording time
can also be checked.

Remote control sensor

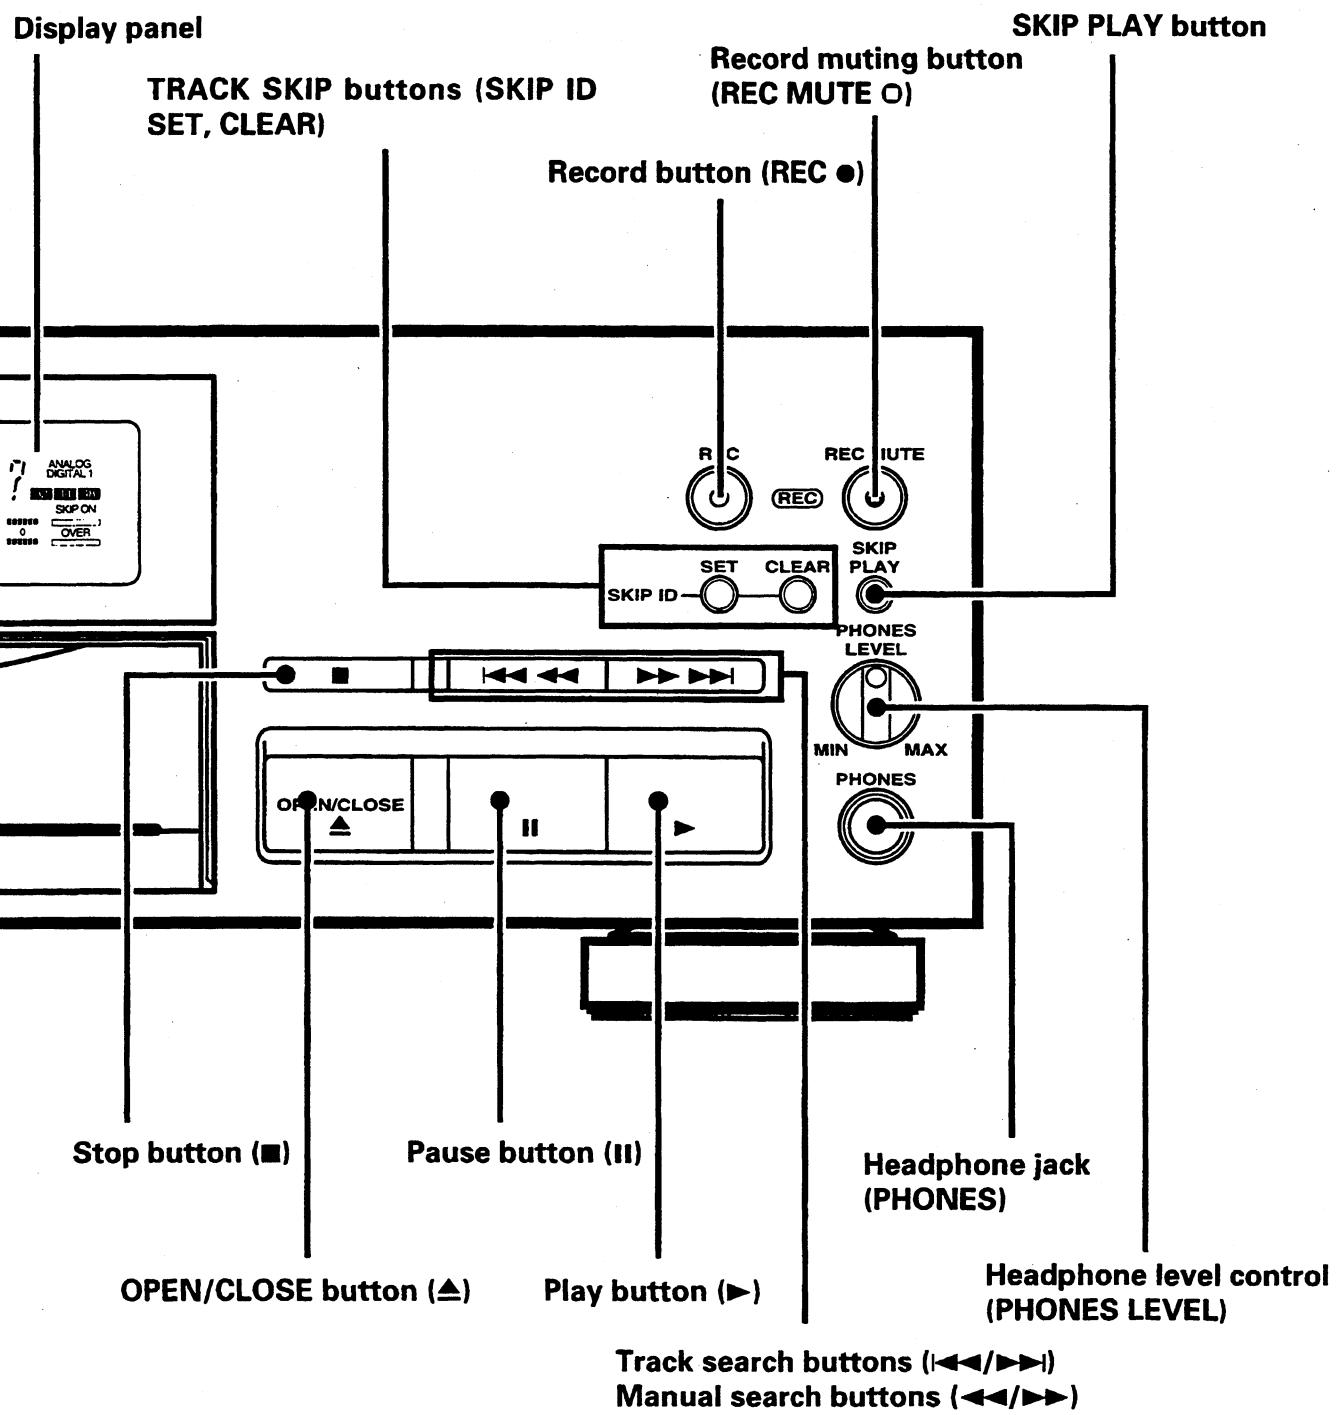

INPUT SELECTOR button
Also for monitoring input

FINALIZE button
(For TOC recording)

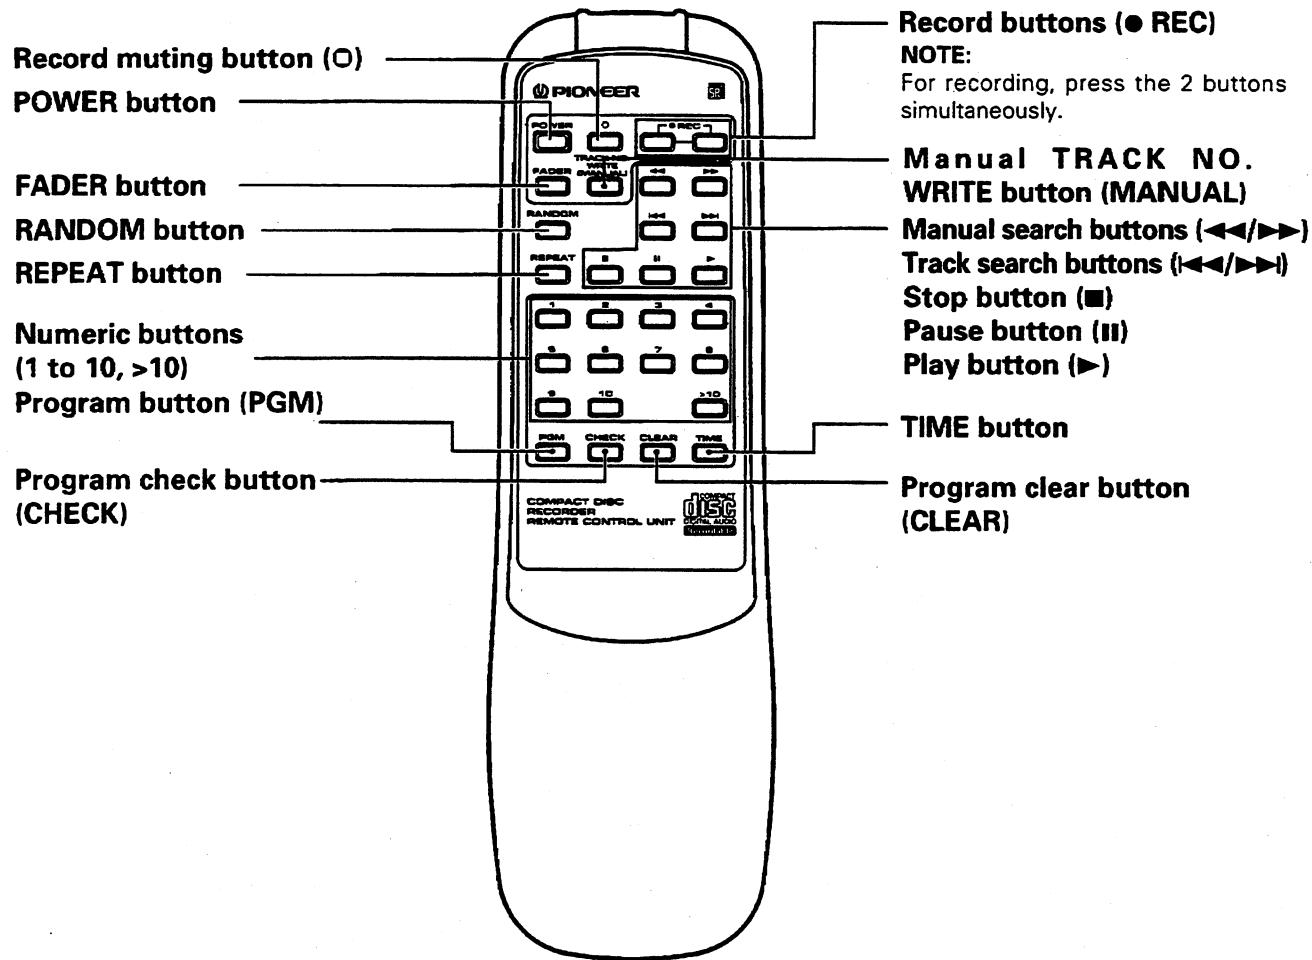

Disc tray

DIGITAL SYNCHRO button

PDR-04

• REMOTE CONTROL UNIT

■ SPECIFICATIONS

1. GENERAL

Model Compact disc audio system
 Applicable discs CDs and CD-Rs
 Power supply AC 120 V, 60 Hz
 Power consumption 16 W
 Operating temperature +5 °C to +35 °C
 (41 °F to +95 °F)
 Weight (without package) 5 kg (11 lb)
 Max. dimensions 420 (W) x 285 (D) x 125 (H) mm
 16-9/16 (W) x 11-7/32 (D) x 4-15/16 (H) in.

2. AUDIO UNIT

Frequency characteristics 2 Hz to 20 kHz
 Playback S/N 108 dB (EIAJ)
 Playback dynamic range 97 dB (EIAJ)
 Playback total harmonic distortion 0.004 % (EIAJ)
 Playback channel separation 96 dB
 Recording S/N 92 dB
 Recording dynamic range 92 dB
 Recording total harmonic distortion 0.005 %
 Output voltage 2 V
 Wow-flutter Less than measurement limit
 ((±0.001 % W.PEAK) (EIAJ))
 Number of channels 2 channels (stereo)
 Optical output: -15 to -20 dBm (wavelength: 660 nm)
 Frequency deflection: Level 2 (standard mode)

* Recording specification values are for the LINE input (ANALOG).

3. INPUT JACKS

Optical digital input jack
Audio LINE input jack

4. OUTPUT JACKS

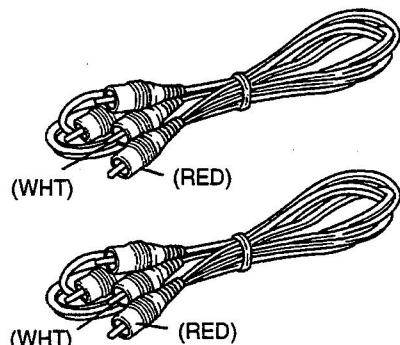

Optical digital output jack
Audio LINE output jack

5. RECORDING FUNCTIONS

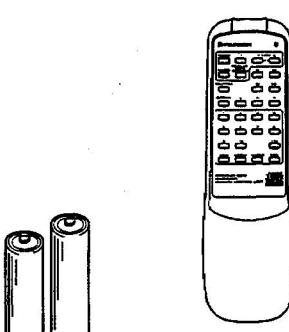

- Recording
- Automatic digital-source synchro recording
(1-track recording)
- Automatic digital-source synchro recording
(All-track recording)
- EASY RECORDING OPERATION
(ANALOG)

• ACCESSORIES

Audio cables ... x 2
(analog recording input, analog playback output)

Remote control unit

Operating instructions
(this booklet)

AA/R6P dry cell batteries ... x 2

6. PLAYBACK FUNCTIONS

- PLAY
- PAUSE
- STOP
- MANUAL search
- TRACK search
- Direct song selection
- 1-Track repeat
- All-track repeat
- Programmed repeat
- Programmed playback (max. 24 tracks)
- Program check
- Program correction
- Program clear
- Pause programming
- Program reservation
- SKIP playback
- DISPLAY OFF
- TIME display switching
- Random playback
- Fade-in/Fade-out

7. ACCESSORIES

• Remote control unit (CU-PD083)	1
• Size AA/R6P dry cell batteries	2
• Audio cables	2
• Operating Instructions	1

NOTE:

The specifications and design of this product are subject to change without notice, due to improvements.
